OF IRRIGOR

AGENDA

Irrigon City Council Meeting November 19, 2024 – 6:00 PM Irrigon City Hall - 500 NE Main Avenue

ZOOM MEETING - Information on Second Page

- Call to Order/Pledge/Roll Call
- Mayor's Comments
- 1. Public Comment Maximum 3 minutes/person/topic. A maximum of 30 minutes may be allotted for the public comment. This is the time provided for individuals wishing to address the Council, at their discretion. Multiple items on the same topic need to be combined through one speaker. Please email (clerk@ci.irrigon.or.us) your comments or questions by 4:30 pm of the meeting date so that the Mayor and Council can hear your comment or question.
- 2. * Consent Agenda (The Consent Agenda allows the Council to approve all items together without discussion or individual motions. Councilors can request an item be removed for later in the meeting and discussion)
 - a. Approval of Minutes October 15, 2024
 - b. City Manager Report and Staff Updates
 - c. Accounts Payable
 - d. Law Enforcement
 - e. Municipal Court
 - f. Correspondence
- 3. Employment Land, Strategies Plan Update- Carla Mclane
- 4. * Irrigon Cross Connection Control Program
- 5. * Quotes for Lift Station Generator (SB1530 Infrastructure Project)
- 6. * Ordinance 263-24 Vacating a City Street for Development, Declaring an Emergency
- 7. Items for Future Council Meetings
 - Annual Audit Report –Dec 2024
 - Oregon State Parks "Splash Park Grant" Agreement -Dec 2024 / Jan 2025
 - Swearing in of Elected Councilors Jan 2025
 - Selection of Mayor Jan 2025
 - Selection of Mayor Pro Tem Jan 2025
 - SB1530 Infrastructure Project –Jan/ Feb 2025
 - Food Pod Construction Project Award
 Dec 2024
 - Splash Park Construction 2026
 - Ordinance 260-23 "Camping and Homelessness" TBD
 - Development Code On-going

Next Regular Meeting Date – December 17, 2024

* Denotes a motion and vote required.

If you would like to attend and need assistance, please phone Irrigon City Hall at 1.541.922.3047 or TTY relay 1.800.735.2900 The facility is accessible for people with disabilities. Records Requests: The public may request documents for review, as legally applicable. A written request shall be submitted with a response in 5 business days of the time and cost for such public document request. City will proceed upon written notice to proceed or disregard the request.

Minutes

Irrigon City Council Meeting October 15, 2024 Irrigon City Hall - 500 NE Main Avenue

The meeting was called to order at 6:09 pm.

Mayor Pro-Tem Benji Calvert led in the Pledge of Allegiance.

Councilors present: Mayor Pro-Tem Benji Calvert, Melvin Lambert, Daren Strong, Heather Bishop, Hector Cano and Marilina Avila-Serratos. Mayor Michelle Patton had an excused absence.

A quorum was present.

City Staff present: City Manager Aaron Palmquist, Finance & Administrative Director Amanda Ferguson and city planning consultant Carla McLane of McLane Consulting.

Audience present: John Bass and Gus Peterson

Mayor's Comments

The League of Oregon Cities (LOC) will be having an Elected Essentials Workshop in Pendleton on December 19, 2024. All councilors should plan on attending.

1. Public Comment

Gus Peterson from Ione addressed the council. Stating that he was running for Morrow County Commissioner because he was tired of the fighting and petty arguments. He sees himself as a positive visionary, plans to attend all city/county meetings that he is able and be regularly involved.

- 2. * Consent Agenda
 - a. Approval of Minutes September 17, 2024
 - b. City Manager Report and Staff Updates
 - c. Accounts Payable
 - d. Law Enforcement
 - e. Municipal Court
 - f. Correspondence

Heather Bishop moved to accept and approve the consent agenda as presented. Melvin Lambert seconded the motion.

Motion passed unanimously

3. Employment Land, Strategies Plan

After discussing the possibility of bringing in light industrial businesses to Irrigon at the August 20, 2024 city council meeting Carla McLane was asked to bring more information regarding the process to present to council.

Oregon is governed by a statewide land use planning program. The state has in place requirements that communities wanting to either expand their urban growth boundary (UGB) or convert other lands to employment lands (commercial or industrial) they need complete an Economic Opportunities Analysis (EOA) to determine, in economic terms, the supply and demand for those types of lands.

The Department of Land Conservation and Development defines EOA as follows: "An Economic Opportunity Analysis is like an economic forecast for an area: it equips cities with information to help prepare for growth over time. These analyses help cities and counties understand which industries and services will thrive in their area, and how they can best use land within their urban growth boundaries (UGB)."

As part of the EOA process a Public Advisory Committee, or PAC, will be formed to provide insight and guidance to the process, the contractor will evaluate Goal 9 of the Comprehensive Plan to be sure that the policies are adequate to support the desired outcomes related to employment lands, and the EOA will outline the various supply and demand scenarios for the City of Irrigon. Once a contractor is selected, the process generally takes about nine months to complete and should result in an expansion of the UGB or a change in zoning of lands to support economic development, or both.

Questions that need to be considered are: How would food processing or data center development be welcomed in our community? Can economic development be done in a way that would be beneficial to the community? Does the city have adequate infrastructure to support these types of development? Many of these questions can and will be answered through an EOA as well as many others.

Carla asked if there was a consensus for her to move forward with a simple scope of work for a Request for Proposals (RFP), as well as to have a discussion with Department of Land Conservation and Development (DLCD) in regards to an Economic Opportunity Analysis (EOA) and whether a housing analysis will be needed. Irrigon's housing information from 2018 still has relevance and may be enough. The city's transportation system plan may need to be updated as well. The city's current commercial code needs to be rewritten. The current light industrial code has several uses, but it is outdated and needs to be updated.

The projected cost for the Economic Opportunity Analysis is \$85,000 and the Economic Opportunity Analysis with a Housing Analysis is \$135,000-150,000.

Potential funding sources are grants for economic opportunity analysis or other entities that would benefit from the EOA might be filling to fund the project. The city could ask for additional funding from the CREZ board.

Questions were asked by Heather Bishop, if farmland is rezoned, will the farmers be required to sell that property or conform to the new zoning requirements? If property owners refused to sell, would these actions be mute? Should we discuss it with landowners before moving forward?

Palmquist believes that if the price is right the farmers will sell.

Carla recommended the following steps: find employment lands, then have conversations with landowners to determine willingness.

Possible industries are AWS, data centers, data center support services, contractors, construction, or processing plants. As data centers move into an area, other industries that support their operations move in as well such as air filter manufacturing for data centers.

Benji Calvert declared all communities are experiencing budget expenses increases and the tax base is not keeping up. Residential land doesn't give a very good tax base, so commercial and industrial lands are needed for growth.

Hector Cano requested getting the community involved before the request for proposals. This is a benefit for the community.

Heather requested that an announcement be made to the public, making them aware that the council is considering going out for a RFP for a EOA.

Prior to the meeting, there could be a question-and-answer session. The council could have dialogue and get a sense of what people want.

Heather stated she wants a better understanding and community input before making a decision.

Carla agreed to bring back more information at the November council meeting. Then the scope of work and RFP at the December council meeting.

4. * SB1530 Infrastructure Lift Station Project Bid Award

The city received two eligible bids for this project. The lowest-noted public bidder, Pump Tech, LLC and Romtec Utilities, Inc., complies with the noted requirements as set forth in the bidding documents.

Melvin Lambert moved to award the Advanced Lift Station Project to Pump Tech for \$149,850 prepackaged station and Romtec utilities for \$54,375 back up generator as presented and authorizing the mayor and city manager to sign applicable documents.

Daren Strong seconded the motion. Motion passed unanimously.

5. * Irrigon Motto Contest Selection

In June of this year the City Council put forth a contest for a new motto, which would be started at the beginning of the school year. Five (5) groups of individuals were solicitated (IHS, Morrow Ed Center, IES, AC Houghton, and the Irrigon public community). Entries were to be returned by Friday, October 4, 2024. Six (6) entries were received. The following are the entries:

- AC Houghton Mikah Moore submitted "Columbia Spirit, Small town Heart"
- IHS Evan Purves submitted, "Just a Cast Away"
- · Community Karma Ezell submitted, "Sunsets, River, Fish and Fun"
- Community Karma Ezell submitted, "Small Town With Big Heart"
- AC Houghton Mateo Mendoza submitted, "Exploring Heritage, Ignite our Future"
- AC Houghton Mia Mendoza submitted, "Uniting Journey to Discover Together"

Everyone gets a gift card, but the winner gets a wireless microphone, gift card, trophy and shirt or sweatshirt with new motto on it.

Benji nominated "Columbia Spirit, Small Town Heart"

Hector nominated, "Just a Cast Away"

Heather nominated, "Exploring Heritage, Ignite our Future"

Vote was taken and the motto "Columbia Spirit, Small Town Heart" received 4 votes and "Just a Cast Away" received 2 votes.

Heather moved to select the motto "Columbia Spirit, Small Town Heart" as the winner for the motto contest as received from Mikah Moore. Marlina Avila-Serratos seconded the motion. Motion passed with one nay from Councilor Melvin Lambert.

6. * Oregon State Parks "Splash Park Grant" Agreement

This item was postponed to a later meeting. The City of Irrigon has been awarded the \$1 million for the splash park grant but DOJ is still reviewing the documents.

- 7. Items for Future Council Meetings
 - Annual Audit Report Nov/Dec 2024
 - SB1530 Infrastructure Project Feb 2025
 - Food Pod Construction Project Fall 2024
 - Splash Park Construction 2026

- Ordinance 260-23 "Camping and Homelessness" TBD
- Boards and Commissions (Irrigon Code) –TBD
- Development Code On-going

Michelle Patton, Mayor	Aaron Palmquist, City Manager
Signed:	ATTEST:
Minutes prepared by Amanda Ferguson.	
Meeting adjourned at 7:40 pm	
Marlina moved to adjourn the meeting.	
 Public Contracting & Purchasing Policy – TBI)

City Manager Report 11-19-2024

Several seasonal activities and events have taken place with more to come for the remainder of the year. A big one was the annual Trunk and Treat that saw several participants in the Irrigon Chamber of Commerce annual event. The Irrigon Rural Fire Protection District put on an amazing haunted house event. Thank you, Irrigon community, for supporting these events and several others during this time of year.

The City Council voted on the new motto for Irrigon, "Columbia Spirit, Small Town Heart" suggested by Mikah Moore. Each participant was awarded accordingly and now staff is searching out various designs for a logo to go with this great motto. Recommendation will be forthcoming to council in the near future.

The November 2024 General Election brought about many changes both locally and nationally. For Irrigon all four (4) members seeking a council position won. We congratulate Hector Cano, Melvin Lamber, Marlin Serratos, and Tom Roberts. Each member will be sworn into office at the January 21, 2025 City Council meeting.

To provide assistance and education for new councilors and those returning the League of Oregon Cities (LOC) will be holding and Elected Essentials Training December 19th and 20th, in the evening in Pendleton. This is a great opportunity to network and gain additional insight. Information is in the packet under correspondence regarding the training.

Reminder, the Oregon Government Ethics Commission (OGEC) had legislators adopt into law training that is required by all elected individuals. Please refer to previous emails sent out by OGEC on the required training.

Court/Law Enforcement

As of Monday, November 11, 2024 Karma Ezell has added the Court Clerk to her duties. This change is because Trista Seastone, City Clerk and Court Clerk has left the City of Irrigon employment and joined Morrow County Health District. She will be missed but staff will continue to move forward in providing continued top-notch service. While Karma continues with code enforcement activities, she will no longer issue citations for city code violations. Those requiring citations will be handled by other city staff, keeping a clear separation between duties.

The court is still awaiting a response from the state regarding the opportunity for the judge the opportunity, and our municipal court, to use the LEDS (law enforcement data systems) when dealing and taking action on violations and with defendants. The one property that continues to see multiple unfounded calls, whether to Morrow County or the city, has pleaded not guilty and will have a trial on December 10, 2024.

Law enforcement continues to stay very busy, with MCSO looking to hire more officers. This past month's information reports were not available at this writing. If they do show in time, copies will be made available for the City Council meeting.

Public Works (PW)

Several projects are being finalized with some out for bid, such as the Food Pod Project. We anticipate good bids for the work but we will not become overly confident as we continually seek ways to keep costs down.

As part of the Food Pod Project, lighting is required, that has a previously approved design. We have been working with Rock Enterprise on a "solar" option and we believe we have a good proto-type. If desired it is on the north side of W. Columbia Lane just before N. First Street. While it appears that it does not have as much light it is a different bulb (LED) design but only less than 5 lumens than the powered lights. Please check this light out as the Food Pod project will have about six of these where 730 will eventually have between 15 and 20 along the south side of US 730. Other jurisdictions are requesting the layout and design of this LED layout.

The City's required Cross-Connection Program is in tonight's packet for adoption. This has been a long and detailed process but we are glad that it is finally completed, meeting OHA's requirements. A few months down the road we will bring the Water Conservation Plan before council for adoption.

We have been working with ODOT on the ADA curb ramps at various intersections on the north side of US 730 walking path. As previously mentioned, this has resulted from a multi-year law suit against ODOT. This has been a challenging process and staff stood firm, taking the main direction that the side streets should not be narrowed. With that the side street travel lanes will be a minimum of 12 feet wide (24 feet between the ADA yellow truncated domes). In order to accomplish this the city will need to provide Additional funds for the increased paving. This is estimated to be about \$50,000. We will pull the funds for CREZ Infrastructure dollars. Additionally, I am working with the State ODOT Traffic Engineer on eliminating the installation of an ADA ramp that would cross from the west side of Third Street right through the traffic delineators (cone dividers) into a right-hand turn lane from US 730 and going to nowhere. With the support of our local ODOT Region we believe that this removal makes common sense and is a good safety decision.

It is quietly noted that the City of Irrigon is number one of the ODOT Region 5's Small City Allotment (SCA) grant. We are now waiting on the State to make the final decision. Historical practice has been that the state accepts the regions recommendation. This means that the \$250,000 application for the sidewalk from the city parking lot, heading west to AC Houghton, is very likely to be approved. The state SCA is changing their application timeline to better align with small city budget cycles. While we will not be successful this next cycle, as we will have an open project, we will make application. One of the three (3) requirements for consideration is that our Region 5 ODOT will be granted a certain percentage of the states SCA funds based on the number of applications submitted.

DEQ has reviewed the SB1530 Infrastructure Project and are prepared to proceed with their approval memo. This means that the project will go to bid as scheduled.

We are still waiting notification by the Oregon State Parks Commission for the Irrigon Parks project. Once we receive the formal contract. JUB will begin the process of formally designing at that time. Project construction still remains to begin sometime in 2026.

Thank you for your patience as our public works staff work diligently to provide for the many services enjoyed in Irrigon.

Financial/Administration

As mentioned above Trista has left the City of Irrigon. The position for City Clerk has been announced and applications are being accepted. Amanda will continue to supervise the position and it will solely focus on front office items, as Trista previously performed.

The annual audit work has been completed and we are again looking at another successful reporting year. The audit presentation is scheduled for the December meeting.

Participating by Zoom has now become a generally acceptable means for connecting to public meetings. Individuals present at the meeting in person are requested to speak up and speak slower so that those with hearing challenges can hear. When using Zoom, rename yourself by clicking on the three little dots in the upper right-hand corner of the Zoom screen. To address the council on a topic/question notify the City Clerk by 4:30 pm the day of the council meeting.

Anyone from the public needing assistance or questions, contact Irrigon City Hall. For councilors, contact me directly and we will provide the requested information on time. It is always best to ask questions and gather information from all perspectives. Staff and I thank you for your continued support.

Sincerely

Council Approval Report

Updates from your Morrow County Sheriff's Office

Your Mcso

OSSA

Oregon State Sheriffs' Association

The Oregon State Sheriffs' Association was formed in 1916 to give Oregon Sheriffs a single and effective voice.

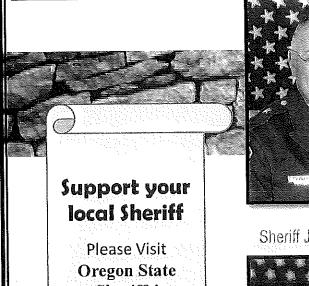

BECOME A MEMBER

Individuals and businesses who want to support public safety across the State of Oregon may join the Oregon State Sheriffs' Association (OSSA), a tax-exempt non-profit organization. Your tax deductible dues and contributions support Oregon's 36 elected sheriffs and their staff as they strive to improve citizen and community safety on a daily basis.

It is easy to join and all gifts are tax deductible. You'll also receive special membership benefits including the quarterly magazine, *Oregon Sheriff*, which will keep you up-to-date with sheriffs around the state and current public safety issues; a membership card; decals; and one automatic entry into the drawing for a Glock G43 handgun, generously donated by Greystone Tactical.

MCSO Mission

"The Mission of the Morrow County Sheriff's Office is to protect the rights of all people and to promote **safety**, **security** and **livability** for all Morrow County citizens and visitors"

This K-9
Duo is at
it again helping to
keep
Morrow
County
safe!

MCSO Deputies Royal, Murphy, and Duvall were working a case when the suspects fled into the night, near the Rest Area West of Boardman. Deputies located one, then **Deputy Colleen Neubert and K-9 Telly** were deployed to assist in locating the other.

K-9 Telly located Tevin Anthony Thomas, 27, Transient, he was taken into custody and lodged at the Umatilla County Jail. He had nine warrants from three different agencies and a total bail of \$245,000. Warrants included multiple charges of Theft I, Theft II and Criminal Trespass I and many others. Congrats to the hard-working MCSO deputies and this K-9 Team - great job!

Deputy Neubert and K-9 Telly recently passed their annual recertification as a Patrol Team. They also trained in K9 and Drone integration - making searching more efficient.

Always striving to better serve and protect our citizens. Keep up the good work!

Did you know 222_

History bites from Oregon State Sheriff's Association

In each of the 36 counties in Oregon, the sheriff is the chief law enforcement officer. Their primary duty is to give full police protection to the unincorporated areas of the county. However, they maintain full police jurisdiction in all municipalities.

All sheriffs have full police authority in any county in Oregon when requested by another sheriff. In this respect, these leaders have established great working rapport. The communication between the respective sheriffs is effective, efficient, and a true service to the people of Oregon.

Telly wants everyone to know about. . .

SafeOregon – It is a school safety tip line created for Oregon students, parents, school staff, community members, and law enforcement officers to report and respond to student safety threats.

The tip line is a tool to report potential threats against students and schools in a confidential or anonymous way.

Tips can be submitting through an email, a phone call, text, a mobile app or a web portal.

We have the chance to prevent violence and intervene early in the life of a struggling young person, helping when they need it before the situation turns into a tragedy.

If you see or hear something, say something.

Text or Call 844-472-3367

Get the SAFEOREGON App

This tip line is <u>NOT</u> for immediate emergency response.
Emergency situations should always go to 9-1-1.

New Faces & Changes at MCSO in 2024

In January Andrea Acosta-Garcia

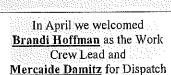

was sworn-in to her new position by Sheriff Bowles. From Dispatcher to Parole and Probation Officer! In March we welcomed

Wade Duvall & Mason Murphy
being sworn-in as patrol deputies.

Tom Roberts was swore-in as a

Special Deputy assigned to

Court Security.

In May it was <u>Tim Haney</u> being sworn-in by Undersheriff Snyder as a Patrol Deputy.

In July it was <u>David Dooney</u>

- Special Deputy assigned to
the Marine position.

In October Sheriff Bowles swore-in <u>Edward Juarez</u> as a Patrol Deputy.

MCSO Probation Director Lt. Gina Wilson graduated from the International Public Safety Leadership and Ethics Institute – Leadership Training Program.

An intensive program that included 160 hours spread over 6 months. The program graduated 12 public service leaders from

Eastern Oregon.

"I'm happy to support this group of leaders in our profession.

LT. Wilson, I'm proud of your accomplishments and appreciate your commitment and dedication.

Congratulations to all graduates.

Great Job!"

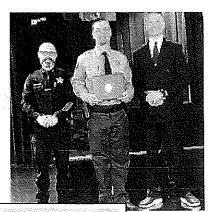

-Sheriff

The <u>Police Academy</u> is 16
weeks of intense training that
covers several areas of Law
Enforcement – after which these
graduates will be on patrol with a
Field Training Officer while they
complete a 12-week Field
Training Evaluation Program.

Graduation Time - 2024!

MCSO Patrol Deputy Steve Larsen

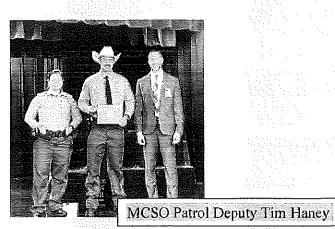

MCSO Patrol Deputy Colten Seelye

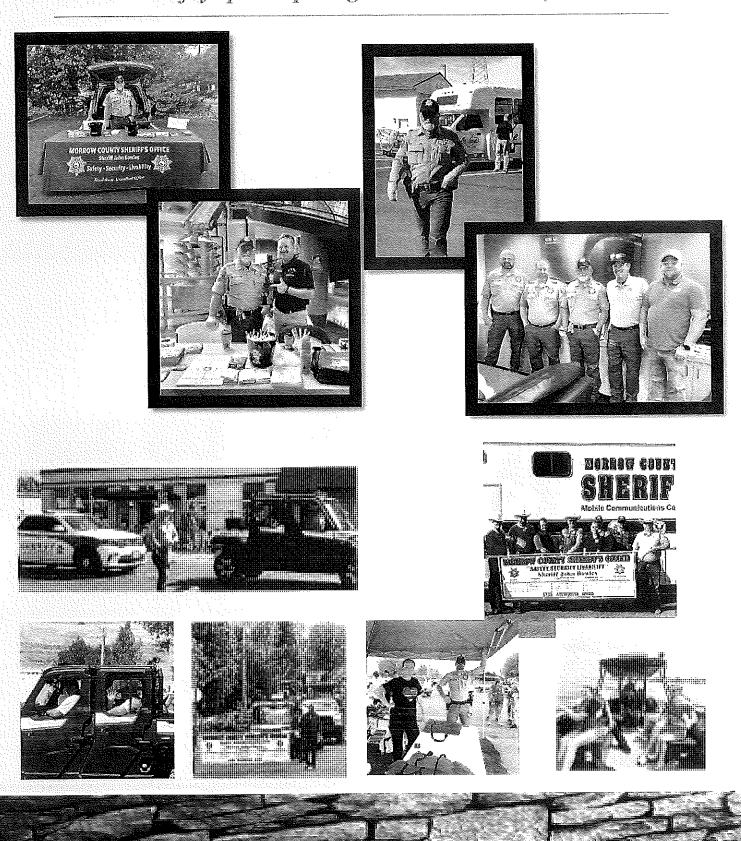

MCSO Patrol Deputy Wade Duvall

MCSO Patrol Deputy Ryan Freeman

MCSO enjoys participating in our Community Events!

This is a LOCATOR app that is used all over the world.
It is advertised as the
"simplest way to talk about location"

This is NOT a tracking app. It does not track your every move. You only activate this when you need it, similar to GPS.

This App allocates a unique 3-word-sequence to every 10 square feet.

If you are traveling, and have an emergency,

Emergency Services can always find you if you both use the
What3words App. This app is accepted by over 4,800 Emergency

Communications 9-1-1 Centers across the U.S.

It is also compatible with Google Maps and Apple Maps.

If you are on a remote highway somewhere, or in a busy city, and don't know the address of your location, or how to tell someone how to find you, that is no longer a problem with What 3 Words.

Even if you have the address we might lose time, trying to find you In Emergency situations saving time, can save lives.

If you are at a big complex, like a school or sporting events center, or even at a large park, and you share your unique 3 words location, we will then be able to get help to your exact location.

Try it out between you and your family and friends, see what you think.

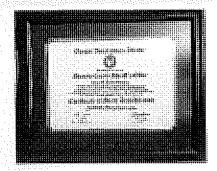

This is not just for emergencies. It works for everyday use between you and whoever you wish to share your location with or if you are trying to travel to a specific location.

Other people only know your location, if you tell them.

For more information go to. . . What3words.com

MCSO holds dual State of Oregon Law Enforcement Accreditation

Morrow County Sheriff's Office & Morrow County 911 EACH awarded STATE ACCREDITATION by the Oregon Accreditation Alliance.

The Oregon Accreditation Alliance Board members include an Executive Director and 20 top level Oregon Law Enforcement professionals.

They are tasked with overseeing the Accreditation process for Law Enforcement Agencies in the State of Oregon.

STATE ACCREDITATION was awarded to Morrow County Sheriff's Office and another STATE ACCREDITATION was awarded to Morrow County 911, (the Communications Center) both in January 2022. Recertification is every 3 years.

At the time that MCSO received Accreditation, only 14 Sheriff's Offices out of 36 in the state of Oregon had achieved Accreditation.

The law enforcement accreditation system established a uniform set of "best practices" for agencies that are consistent on an international scale, measurable, verified by an independent body as to compliance, and creates an accountability to the community, elected policy makers, and the line of officers who are performing the day to day work.

Every standard is intended to make an agency more professional while at the same time improving its services to the community.

On average it takes approximately 18-24 months just to prepare an agency for an onsite assessment for the accreditation process. MCSO completed this onerous task within 12 months, for both the Sheriff's Office and the 911 Communications Center, which are separate processes.

"We are very proud that we hold these Law Enforcement Accreditations and are able to show to our citizens that we are following the best practices for Law Enforcement that is measurable and verified."

- Sheriff Bowles

From our friends at Oregon State Police:

Oregon State Police (OSP) Fish & Wildlife Division

Turn-in-Poachers (TIP)

The TIP program is a collaboration between OSP, Oregon Hunters Association, Oregon Department of Fish & Wildlife, Oregon Wildlife Coalition, Oregon Outfitter & Guides Association and the Oregon State Marine Board.

POACHING (illegal taking of wildlife or fish), trespassing, littering, theft, destroying of property and road closure violations affect all Oregonians. Poaching wildlife and damaging habitats affects present and future generations of wildlife, impacts communities and the economy, and creates enforcement challenges. People who "work" the system and falsely apply for resident license or tags are not legally hunting or angling and are considered POACHERS.

The TIP program offers cash rewards or preference point rewards to people who provide information that leads to an arrest or issuance of a citation, to a suspect, for the unlawful killing of wildlife, and/or waste of big game.

When making a report please provide as much information as possible.

All TIP Reporting is anonymous.

Description of suspicious activity or violation.

Date, time and location of such activity.

Description of any vehicles and/or license plate.

Name and/or description of suspects involved.

Type of wildlife involved.

You can complete an online form or print out a paper form & fill out. Call, email, fax or mail the information. For further information:

TIP@osp.oregon.gov 1-800-452-7888 *OSP or *677 from cell phone

Morrow County Sheriff's Office Stats for 2022 and 2023

The Sheriff's Office proudly serves the approximately 13,000 residents and thousands of visitors to Morrow County each year. The coverage area spans over 2049 square miles and consists of the Columbia River, industry, ranching, farming, high desert, mountains, back roads, highways, interstate, five cities and unincorporated areas.

In 2023 our 911 Dispatch Center received a total of 20,604 calls for law enforcement, medical and fire services. Of the 20,604 calls received,

16,334 of the calls were for law enforcement services.

Protecting people's rights, safety, security and livability are our top priorities.

I have a dedicated and professional staff who work to provide quality public service every day.

I thank the Sheriff's Office staff for their continued dedication and service.

I would also like to thank our communities for their support and partnerships.

I look forward to the future and a great 2025. Be Safe. - Sheriff Bowles

A look back at Fire Season 2024 ...

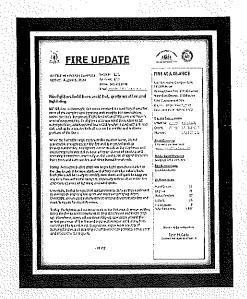

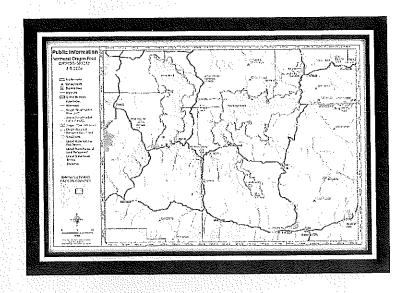

Thank you to the Firefighters, and all those who assisted in getting us through such a challenging Fire Season.

Winter is almost here! Now is the time to prepare your "Winter Ready Bag" for your vehicle.

Every year, MCSO conducts several Search & Rescue missions to rescue people when they unexpectedly encountered snow in the mountains and they end up stuck.

Often, there are children involved and no one is prepared for the weather. No winter clothing, food or water, to get by until we can find them.

We get it, everyone gets surprised once in a while, but a little preparation can go a long way, in those unexpected circumstances.

Customize your own "Winter Ready Bag" to what fits you and your family. It might include things such as:

Extra coats, gloves, stocking hats, blankets, water, granola bars, cell phone charging cords, flashlight with new batteries and extra batteries — maybe throw in an activity book for the kids.

Then, if the unexpected happens, hopefully you have cell service.

Call of text 91/1, and if possible use the What 3 Words App

to mark your location and we will come find you.

Please make sure TIRE CHAINS are in your vehicle!

We hope your "Winter Ready Bag" makes the wait a little more comfortable (5)

final thoughts...

Our heartfelt gratitude to all the people who put their lives on hold, to help out with the horrific fires of 2024.

From the volunteers who fed many other hardworking volunteers, to the farmers and ranchers that pitched-in with equipment and sweat to make sure that they did all they could to help their fellow man.

And of course, our gratitude to the firefighters who risk everything.

In these times of divisiveness, finger pointing and anger, it restores your faith in humanity to witness the best of human nature.

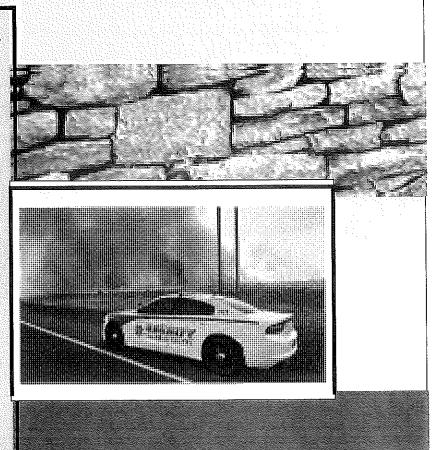

Sheriff John Bowles and Emergency Manager Steve Freeland as well as the whole Morrow County Sheriff's Office staff, salute you all, for a job well done.

Sign Up for an Elected Essentials Workshop

Region 11 Cities:

Learn the basics of municipal governance at a free in-person workshop for elected officials and city staff.

December 19 and December 20 - 5:00 p.m. - 9:00 p.m.

Top 5 Reasons To Attend Elected Essentials

I'm newly elected, why should I attend?

Elected Essentials is the only training in the State of Oregon that will give you the basics of city government and what to expect as a newly elected city official all in one day.

I'm a seasoned official, why should I attend again?

Attending Elected Essentials supports your newly elected colleagues and will provide you with the legal updates that have transpired since 2022, the last time Elected Essentials was offered.

What laws have changed?

Laws on public meetings, virtual meetings, ethics, records, social media and more.

Are there any new topics being presented?

Yes! LOC lobbyists will be present and will be leading a Lobbying 101 session designed to inform, teach, and prepare you to best reach your state and federal representatives.

Why else should I attend?

Elected Essentials is a free and engaging opportunity to learn, network and get to know staff at organizations designed to support your city and you as an elected official. You will have the opportunity to get to know your counterparts in neighboring cities. In addition, There will be an interactive free networking lunch led by your Oregon Mayors Association (OMA) and Oregon City/County Management Association (OCCMA) colleagues.

How do I sign up?

View the complete schedule and register on the LOC Website!

For questions, please email me at cwilson@orcities.org or loc@orcities.org.

We look forward to seeing you there!

Claire Wilson, *Training Coordinator*Office: 503-588-6550 | Cell: (971) 428-7203

ELECTED ESSENTIALS WORKSHOPS

New to city government? Need a refresher on government fundamentals? Plan now to attend one of 13 FREE trainings around the state.

LOC is thrilled to offer our signature Elected Essentials training in person again this winter. The LOC's Elected Essentials program provides newly elected officials, experienced elected officials, and city staff with free training on the basics of municipal governance in Oregon.

Topics include:

- · How to Achieve a High Functioning City Council
- What City Officials Need to Know About Oregon's Public Records Law
- Public Meetings in Oregon What the Law Says & Best Practices
- Understanding Your Legal Obligations Under Oregon's Ethics Laws
- · Legal Powers & Impediments Affecting Elected Officials
- · Lobbying 101

Registration is FREE and lunch is included.

The League of Oregon Cities' (LOC) Board of Directors unanimously adopted eight legislative priorities for cities for the 2025 and 2026 sessions. The priorities were identified through a committee process and a vote by the LOC's 241 member cities. The following nine issues received the most votes from members, and were adopted by the LOC Board:

Infrastructure Funding

The LOC will advocate for a comprehensive infrastructure package to support increased water, sewer, stormwater, and road investments. The LOC will advocate to maintain and increase state investments to support the development and preservation of a range of needed housing types and affordability.

2025 Transportation Package

The LOC will support a robust, long-term, multimodal transportation package focused on stabilizing funding for operations and maintenance for local governments and ODOT, continued investment in transit and bike/ped programs, safety, congestion management, and completion of projects from HB 2017. This objective includes support for a transition from gas tax to road user fee and improved community safety and livability.

Recreational Immunity

The LOC will introduce legislation to protect cities and other landowners who open their property for recreational purposes from tort liability claims.

Behavioral Health Enhancements

The LOC will support legislation to expand access to behavioral health treatment beds and allow courts greater ability to direct persons unable to care for themselves into treatment through the civil commitment process.

Lodging Tax Flexibility

The LOC will advocate for legislation that will increase the flexibility to use locally administered and collected lodging tax revenue to support tourism-impacted services. These services include public safety, infrastructure, and housing-related investment.

The LOC will support a comprehensive homeless response package to fund the needs of homeless shelters, homeless response efforts statewide, and capital projects. Funding should include baseline operational support to continue and strengthen coordinated regional homeless response and include a range of shelter types and services, including alternative shelter models, safe parking programs, rapid rehousing, outreach, case management, staffing and administrative support, and other related services.

Address Energy Affordability Challenges from Rising Utility Costs

The LOC will support actions to maintain affordable, reliable, and resilient energy resources and invest in programs and new technology that support energy efficiency, renewable energy, and resilient communities. These efforts will help address members' concerns about increased costs associated with energy usage.

Operator-In-Training Apprenticeships

The LOC will advocate for funding apprenticeship training programs and expanding bilingual training opportunities to promote the workforce development of qualified wastewater and drinking water operators.

ORS 195.530

The LOC will advocate public policy that allows cities to respond to the unique needs of their community's housed and unhoused members. This advocacy will include adjustments to ORS 195.530 to provide cities with the necessary tools to address unsafe camping conditions, safeguard public spaces, and protect the health, safety, and wellness of all community members.

October 22, 2024

Dear City or Irrigon:

We are pleased to report that the 7th Funshine Open Golf Tournament on September 21, 2024, was a huge success. This is due, in part, to your generous support this year.

Because of your support, we will be able to offer scholarships to area graduating seniors in the spring, support the grade schools with needed supplies, brighten the hearts and homes of local families in need during the holidays with food baskets, support our chambers of commerce, and help as emergency situations arise in our communities.

We extend our most heartfelt thanks to you and wish to take this opportunity to let you know how much we appreciate your contribution.

Sincerely,

Melody Tovey, President

Charlene Cooley, Treasurer

EOA (Economic Opportunities Analysis - Item #3

For the past to meetings continual information and progress has been taking place regarding Employment Lands and various processes with State agencies and associated costs projections.

Tonight, Carla Mclane, again provides the continual path forward and information for council discussion and needed opportunities in Irrigon and the long-term benefit and need for improved and clearer understanding.

Carla McLane Consulting, LLC 170 Van Buren Drive Umatilla, Oregon 97882 541-314-3139

mclane@eoni.com

MEMORANDUM

To: Irrigon City Council

From: Carla McLane, Contract Planner

Date: November 12, 2024

RE: Employment Lands: State Agency Inputs; Potential Work and Associated Costs

State Agency Inputs: Aaron and I had a productive meeting with individuals at the Department of Land Conservation and Development (DLCD) and the Oregon Department of Transportation (ODOT) on Thursday, November 7, discussing what the process might look like and what their expectations would be as we continue to explore the creation of additional employment lands in Irrigon. As part of the conversation we talked about the impact of the Housing Needs Analysis (HNA) that was accomplished in 2019 and how to balance a potential reduction in residential land while increasing the amount of industrial land. At this point we do not have a clear path to what new work would need to be accomplished but there was some good news that came out of the conversation. Because Irrigon has not done an Economic Opportunities Analysis (EOA) previously we may not need one now. We are continuing the conversation to better determine what would be needed to address both employment lands and housing needs.

The ODOT input was what I expected; we will need to accomplish a Traffic Impact Analysis (TIA) as any access for industrial development would impact Highway 730, an ODOT facility.

Potential Work: While an EOA may not be needed there may need to be an evaluation of the HNA that was completed in 2019. An updated Buildable Lands Inventory (BLI) may inform both needs sufficiently to move forward with necessary amendments to the Comprehensive Plan, Comprehensive Plan Map, and Zoning Map to effect the change that is desired. As part of the process an update to the text of the Irrigon Development Code, specific to the Industrial Use Zone, will also be needed. Some of that can be done by current contract planning staff with any refinement to the HNA, a Buildable Lands Inventory, or an EOA will require a consultant with those specific skills.

The City of Irrigon will also need to retain a traffic planning firm to develop the required TIA.

Associated Costs: While the specific work around an EOA, the HNA, or a BLI is not yet clear there will probably be some level of assistance that will be needed. It would be safe to assume that the cost of that assistance would most likely be \$50,000. Should we need to do work on both an EOA and HNA that total would be \$100,000. Drawing from other jurisdictions the cost of a TIA is estimated to be \$30,000. The total cost for this work, including the costs of the current contract planner to accomplish the local planning work associated with this project, is probably about \$150,000.

The City Manager is currently writing his report to the Columbia River Enterprise Zone (CREZ) Board which will include a request for funds for this project.

Next Steps: Should the City Council move forward staff will continue the conversation with DLCD and develop a Scope of Work and simple Request for Proposal based on the outcome of that discussion. Selection of a contractor for the TIA would also begin. With the total cost to be less than \$250,000 contractor selections under procurement rules can be made without a formal Request for Proposal process, simplifying and shortening the selection process and timeline. With the holidays quickly approaching, the target for a Scope of Work would be December but more realistically probably January for Council discussion and approval.

A second part of the next steps would be to identify a willing landowner or landowners for this project. Staff have identified certain lands that would fit nicely for this project based on several factors but have not confirmed landowner willingness or participation. Should that landowner group not be willing the proposal may need to change.

During last month's discussion a target of April 1 to begin work was identified. Staff still feel that we can meet that deadline or come close.

Remembering our Mission: Employment lands, when developed increase a city or jurisdiction's tax base. Currently the City of Irrigon has no industrial development and limited commercial development providing tax revenue that supports needed city and public services. It is not just the City of Irrigon's general fund that could be benefitted by positive outcomes of creating employment lands. Other taxing districts, such as the Fire District, would see gains to their general fund revenue as well, which could allow for investment in equipment, training, and staffing.

Looking forward to continuing this discussion.

To: City Council

RE: Irrigon Cross Connection Control Program - Item #4

As part of the Irrigon Municipal Code, Title 8 (8-1-15) as adopted in Ordinance Number 104 (6-10-1986) the City of Irrigon is to have a clear and active Cross Connection program. This requirement, as outlined and managed in accordance with OHA (Oregon Health Authority) requirements, is needing updated and adopted by the City Council.

City staff and JUB (City Engineers) have been working on this program as noted in the latest OHA review and inspection. Irrigon has a staff member in public works who manages the program. However, any private testing of back-flow devices is administered through a third party. This city also has multiple devices and uses an independent party for annual testing, ensuring that city water maintains safe drinking standards.

Staff is available for questions and thank JUB for their assistance in updating this program for record as well as the council's support in maintaining safe and clean drinking water for our customers and the community.

Staff recommends the Irrigon Cross Connection Control Program be approved as presented by JUB and notification be made to OHA (Oregon Health Authority) with postings made to the webpage accordingly.

J-U-B FAMILY OF COMPANIES

MEMORANDUM

DATE:

November 12th, 2024

TO:

Irrigon City Council

500 NE Main Avenue Irrigon, OR 97844

CC:

Aaron Palmquist, Irrigon City Manager

FROM:

Tyler French, PE

J-U-B Engineers, Inc. 3611 South Zintel Way Kennewick, WA 99337

SUBJECT: Cross Connection Control Program for Council Approval

The City of Irrigon hired J-U-B Engineers, Inc. to develop a Cross Connection Control Program. The purpose of a Cross Connection Control Program (Program) is to outline rules, responsibilities, and guidelines to aid the City in management of clean potable (drinking) water by preventing contamination between non-potable water and potable water.

The City and J-U-B worked together to develop the Program. In October of 2024, Oregon Health Authority (OHA) reviewed and approved the Program.

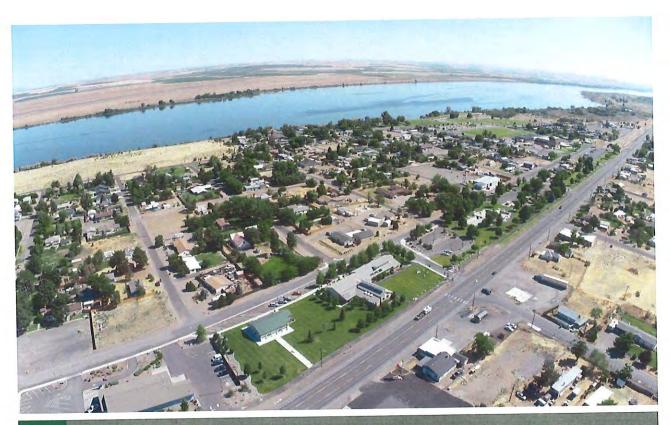

The final Program approved by OHA is attached to this memorandum and is ready for City Council review/approval. Please let us know if there are any questions.

Sincerely,

J-U-B Engineers, Inc.

1. INTRODUCTION

A Cross Connection Control Program (Program) has been established to prevent contamination between non-potable water and potable (drinking) water. The purpose of this Program is to outline rules, responsibilities, and guidelines to aid the City in management of clean potable water and to support the City's Cross Connection Ordinance. The Cross Connection Ordinance is included as Appendix A and can also be found in Title 8-1-15 of the Irrigon Municipal Code.

This Program is the enabling authority for the City to enforce the items established within and is based upon the requirements set by Oregon Administrative Rules (OAR) 333-061-0020, OAR 333-061-0070, and OAR 333-061-0071.

As part of this Program, a business or property owner shall not connect to a potable water system such as a water main or service line without permission from the City. Also, an owner shall not create, maintain, or cause a cross connection. If it is discovered that an owner connected to a potable water system without permission or created a cross connection, the City will discontinue services immediately. Tampering with or bypassing a backflow preventer will also lead to immediate discontinuation of water services.

2. DEFINITIONS (OAR 333-061-0020)

- 1. Approved Backflow Prevention Assembly: a Reduced Pressure Principle Backflow Prevention Assembly, RPDA, Double Check Valve Backflow Prevention Assembly, Double Check-Detector Backflow Prevention Assembly, Pressure Vacuum Breaker Backsiphonage Prevention Assembly, or Spill-Resistant Pressure Vacuum Breaker Backsiphonage Prevention Assembly, of a make, model, orientation, and size approved by the Authority. Assemblies listed in the currently approved backflow prevention assemblies list developed by the University of Southern California, Foundation for Cross-Connection Control and Hydraulic Research, or other testing laboratories using equivalent testing methods, are considered approved by the Authority.
- 2. Atmospheric Vacuum Breaker (AVB): a non-testable device consisting of an air inlet valve or float check, a check seat and an air inlet port(s). This device is designed to protect against a non-health hazard or a health hazard under a backsiphonage condition only. Product and material approval is under the Oregon Plumbing Specialty Code.
- 3. **Backflow:** the flow of water or other liquids, mixtures, or substances into the distributing pipes of a potable supply of water from any sources other than its intended source, and is caused by backsiphonage or backpressure.
- 4. Backflow Prevention Assembly: an assembly preventing backflow such as a Pressure Vacuum Breaker Backsiphonage Prevention Assembly, Spill-Resistant Pressure Vacuum Breaker Backsiphonage Prevention Assembly, Double Check Valve Backflow Prevention Assembly, Double Check-Detector Backflow Prevention Assembly, Reduced Pressure Principle Backflow Prevention Assembly, or Reduced Pressure Principle-Detector Backflow Prevention Assembly and the attached shutoff valves on the inlet and outlet ends of the assembly, assembled as a complete unit.
- 5. **Backpressure:** an elevation of pressure downstream of the distribution system that would cause, or tend to cause, water to flow opposite of its intended direction.

- 6. **Backsiphonage:** a drop in distribution system pressure below atmospheric pressure (partial vacuum), that would cause, or tend to cause, water to flow opposite of its intended direction.
- 7. **Contaminant:** any physical, chemical, biological, or radiological substance or matter in water that creates a health hazard.
- 8. **Cross Connection:** any actual or potential unprotected connection or structural arrangement between the public or user's potable water system and any other source or system through which it is possible to introduce into any part of the potable system any used water, industrial fluid, gas, or substances other than the intended potable water with which the system is supplied. Bypass arrangements, jumper connections, removable sections, swivel, or change-over devices, and other temporary or permanent devices through which, or because of which, backflow can occur are considered to be cross connections.
- 9. Double Check-Detector Backflow Prevention Assembly (DCDA): a specially designed assembly composed of a line size approved double check valve assembly assembled with a bypass containing a specific water meter and an approved double check valve assembly. The meter shall register accurately for only very low rates of flow up to three gallons per minute and shall show a registration for all rates of flow. This assembly is designed to protect against a non-health hazard.
- 10. Double Check Valve Backflow Prevention Assembly (DC): an assembly of two independently acting approved check valves, including tightly closing resilient seated shutoff valves attached at each end of the assembly and fitted with properly located resilient seated test cocks. This assembly is designed to protect against a non-health hazard.
- 11. Health Hazard (Contamination): an impairment of the quality of the water that could create an actual hazard to the public health through poisoning or through the spread of disease by sewage, industrial fluids, waste, or other substances.
- 12. Non-Health Hazard (Pollution): an impairment of the quality of the water to a degree that does not create a hazard to the public health but does adversely affect the aesthetic qualities of such water for potable use.
- 13. Point of Delivery (POD): the point of connection between a public water system and the user's water system. Beyond the POD, the Oregon Plumbing Specialty Code applies. See "Service Connection."
- 14. Premises: real estate and the structures on it.
- 15. **Premises Isolation:** the practice of protecting the public water supply from contamination or pollution by installing backflow prevention assemblies at, or near, the POD where the water supply enters the premises. Premises isolation does not guarantee protection to persons on the premises.
- 16. Pressure Vacuum Breaker Backsiphonage Prevention Assembly (PVB): an assembly consisting of an independently operating, internally loaded check valve and an independently operating loaded air inlet valve located on the discharge side of the check valve. This assembly is to be equipped with properly located resilient seated test cocks and tightly closing resilient seated shutoff valves attached at each end of the assembly. This assembly is designed to protect against a non-health hazard or a health hazard under backsiphonage conditions only.

City of Irrigon

- 17. **Public Health Hazard:** a condition, device or practice which is conducive to the introduction of waterborne disease organisms, or harmful chemical, physical, or radioactive substances into a public water system, and which presents an unreasonable risk to health.
- 18. Reduced Pressure Principle Backflow Prevention Assembly (RP): an assembly containing two independently acting approved check valves, together with a hydraulically operating, mechanically independent pressure differential relief valve located between the check valves and at the same time below the first check valve. The unit shall include properly located resilient seated test cocks and tightly closing resilient seated shutoff valves at each end of the assembly. This assembly is designed to protect against a non-health hazard or a health hazard.
- 19. Reduced Pressure Principle-Detector Backflow Prevention Assembly (RPDA): a specifically designed assembly composed of a line size approved RP with a bypass containing a specific water meter and an approved RP. The meter shall register accurately for only very low rates of flow up to three gallons per minute and shall show a registration for all rates of flow. This assembly is designed to protect against a non-health hazard or a health hazard.

3. CROSS CONNECTION HAZARDS AND RISK LEVEL

Cross connection hazards are categorized by two risk levels:

- Non-Health Hazard, Low Risk (Low Hazard). If the quality of the water system is impaired, but the health of the public is not at risk, then the source from which the contaminated water comes from is a low-risk non-health hazard. Typically, only the aesthetic quality of the water is affected.
- Health Hazard, High Risk (High Hazard). If the quality of the water system has compromised
 public health and creates a hazard through poisoning or spread of disease that is potentially
 life-threatening, then the source from which the contaminated water originates is a high-risk
 health hazard. The contamination could be from sewage, industrial fluids, waste, or other
 sources.

Below is a list of premises which could cause a health hazard if a cross connection where to occur. This list is partly taken from OAR 333-061-0070 and is not inclusive of all potential health hazards or risks.

Low Hazard:

- Chemical-free irrigation which uses reclaimed water
- Drinking fountain
- Chemical-free fire sprinklers
- Coffee/tea/soft drinks/juice machines
- Water storage tanks

High Hazard:

- Agricultural (ex: farms, dairies)
- Car washes
- Commercial laundries and dry cleaners
- Food processing plants
- Medical or dental centers, equipment, and systems
- Fire sprinklers with chemicals
- Fuel/petroleum equipment or storage
- Hose bibb/reel
- Irrigation systems, especially those utilizing chemicals
- Laboratories and equipment
- Machine shop and welding connections
- Piers and docks
- Wastewater lift stations and pumping stations
- Wastewater treatment plants
- Premises with piping under pressure for conveying liquids other than potable water, and the piping is installed in proximity to potable water piping
- Premises with an auxiliary water supply that is connected to a potable water supply
- Premises where the water supplier is denied access or restricted access for survey
- Premises where the water is being treated by the addition of chemical or other additives

NOTE: If a business or property owner who receives water from the City adds chemicals or substances to the water at any time, they must notify the City's designated Cross Connection Specialist immediately. Contact information is provided in Section 10.

4. BACKFLOW PREVENTION METHODS AND APPROVED DEVICES

Backflow prevention methods based on hazard type are listed in the table below (OAR 333-061-0070). A full range of approved devices beyond those listed here can be found on University of Southern California's website:

https://fccchr.usc.edu//list.html

Non-Health Hazard, Low Risk (Pollutant)	Health Hazard, High Risk (Contaminant)	
 Backsiphonage or Backpressure Air Gap Reduced Pressure Principle Backflow Prevention Assembly (RP) Reduced Pressure Principle-Detector Backflow Prevention Assembly (RPDA) Double Check Valve Backflow Prevention Assembly (DC) Double Check-Detector Backflow Prevention Assembly (DCDA) 	 Backsiphonage or Backpressure Air Gap Reduced Pressure Principle Backflow Prevention Assembly (RP) Reduced Pressure Principle-Detector Backflow Prevention Assembly (RPDA) 	

All approved backflow prevention assemblies subject to these rules shall be installed in accordance with OAR 333-061-0071 (Backflow Prevention Assembly Installation and Operation Standards) and the Oregon Plumbing Specialty Code.

5. PROCEDURE FOR INSPECTIONS AND TESTING

Per OAR 333-061-0070(6), every property with a backflow preventer will be tested:

- At the time of installation, after any repair, or when being relocated,
- · At least annually,
- More frequently than annually for approved backflow prevention assemblies that repeatedly fail, or are protecting health hazard cross connections, as determined by the water supplier,
- · After a backflow incident, and
- After an approved air gap is re-plumbed.

If a backflow prevention assembly was in operation before this Program became effective, the above still applies. If there is any concern of a cross connection on the property, a Backflow Assembly Tester must complete an inspection or test. The purpose of the inspection is to determine the need for a backflow prevention assembly or determine if the current backflow prevention assembly is adequate for the hazard level. The purpose of a test is to determine whether the current backflow prevention assembly is working properly. See Section 6 for other reasons an inspection or test may be needed. A decision diagram depicting hazard identification and corrective actions are included in Appendix B.

A website link with an approved list of certified cross connection control staff members and backflow testers in Oregon is included in Section 7. For more detail on inspection and testing, see the Environmental Protection Agency's "Cross-Connection Control Manual" which was published for educational, administrative, and technical reference purposes:

https://nepis.epa.gov/exe/zypdf.cgi/2000262t.pdf?dockey=2000262t.pdf

6. APPLICATION, NOTIFICATION, AND CORRECTIVE ACTION

The City will hold a master list of all known backflow assemblies, completed inspections, and test results for all assemblies in the water system. The master list will include details such as the owner's name, address, type of device, type of use, size of service, hazard level, and various survey data. This information will be collected via an annual application form and upon inspection or testing of the assemblies.

Cross Connection Application Form

Business Owners:

Every business in the City will complete an annual application form which will be used to establish a master list and determine whether an inspection needs to take place. If a new business is created, an application will be required to determine if there are hazards to be inspected and neutralized before opening of the business. If a business contains a backflow assembly and there is a change of business type, an application update will be required to determine whether the backflow preventer assembly meets the new degree of hazard.

The City's designated Cross Connection Specialist is responsible for managing applications and notifying the business owner if an inspection is needed. If a backflow prevention assembly needs to be installed after inspection, the City will follow protocol found in the Corrective Actions section below. An example application form is included in Appendix C.

Property Owners:

If a property is believed to contain a cross connection or has never been evaluated for hazards, an application will be needed to determine whether the property needs to be inspected. The City's designated Cross Connection Specialist is responsible for sending applications to property owners and notifying the owner if an inspection is needed. If a hazard is found on the property upon inspection, the City will follow protocol found in the Corrective Actions section below. An example application form is included in Appendix C.

Annual Testing

If a property contains a backflow prevention assembly as identified via the annual application, a test is required annually and results must be sent to the City by December 1st of each year. If testing results have not been received by the City after the initial deadline, the City will send a testing notice letter and allow for an additional sixty (60) days to report results. If this deadline is not met, the City will issue a fine and may also shut off all water systems connected to the premises. An example inspection notice letter is included in Appendix D.

The City is responsible for following up on any needed corrective actions. The City's designated Backflow Assembly Tester is responsible for ensuring each assembly is tested in the City's water system, either by doing the testing themselves or using a separate certified tester. An example test maintenance report is included in Appendix E.

Corrective Actions (Hazard Neutralization)

If a low health hazard is found on the premises that has not been previously addressed, the (business or property) owner will be notified via letter that the hazard will need to be neutralized with a backflow preventer within one hundred (60) days.

If a high health hazard is found on premises that has not been previously addressed, the (business or property) owner will be notified as soon as possible via letter that the hazard will need to be neutralized with a backflow preventor within thirty (30) days.

If the deadline for neutralizing the hazard (low or high) is not met, the City will issue a fine and also has authority to shut off all water systems connected to the premises. The City is responsible for notifying the owner regarding the need for corrective action. An example hazard notice letter is included in Appendix F.

7. CERTIFIED SPECIALISTS AND TESTERS

The Oregon Health Authority (OHA) maintains an updated list of OHA-Certified Cross Connection Specialists and Backflow Assembly Testers organized by County for easy access to local testers. The list can be found at this website:

 $\underline{www.oregon.gov/oha/ph/healthyenvironments/drinkingwater/crossconnection/pages/publiclist.}$ \underline{aspx}

The American Backflow Prevention Association also keeps an updated list of Certified Backflow Assembly Testers in the US which can be sorted by state at this website:

https://cdn.ymaws.com/www.abpa.org/resource/resmgr/certified lists/tester location 202401 01.pdf

City of Irrigon

The City has a Cross Connection Specialist on staff and hires an independent Backflow Assembly Tester. Contact information is included in Section 10.

8. ANNUAL SUMMARY REPORTS

Each business or property owner with a backflow preventer is required to provide information about their system via the annual Cross Connection Application Form (see Section 6). The City is responsible for collecting and submitting this information in a Cross Connection Annual Summary Report to the OHA each year before the last working day of March. Appendix G contains the 2023 Annual Report for reference. A SmartSheet and PDF copy can be found and submitted at this website:

www.oregon.gov/oha/ph/healthyenvironments/drinkingwater/crossconnection/pages/reports.a spx

9. EDUCATIONAL OPPORTUNITIES

Cross Connection Control Brochures used to assist in educating the public are provided by the American Water Works Association - Pacific Northwest Section. These easy-to-read brochures are included in Appendix H and are also available at this website:

https://doh.wa.gov/community-and-environment/drinking-water/water-system-design-and-planning/cross-connection-control-backflow-prevention/ccc-brochures

Another resource for educational purposes is the Watts Backflow Prevention Educational Handout. This is included in Appendix I and is also available at the Watts Water website:

https://media.wattswater.com/F-CCCH.pdf

Both references listed here will be made available to the public via the City of Irrigon's website.

10. CITY OF IRRIGON CROSS CONNECTION STAFF CONTACT INFORMATION

Cross Connection Control Specialist: Contact City Clerk for Cross Connection Control Specialist

Phone Number: (541)-922-3385

Email Address: clerk@ci.irrigon.or.us

Example Duties:

- Oversees the Cross Connection Control Program
- Keeps a current certification as a Cross Connection Control Specialist
- Keeps City records for cross connections and the master backflow list of assemblies
- Notifies businesses owners and property owners of annual testing requirements
- Sends out survey forms to businesses or property owners as needed
- Notifies the owner if an inspection is needed for their property
- Notifies the owner of any hazards found on the property and the requirement for a backflow preventer
- Completes the annual summary report to submit to the OHA
- Answers the public's questions

Backflow Assembly Tester: Contact City Clerk for designated Backflow Assembly Tester

Phone Number: (541)-922-3385

Email Address: clerk@ci.irrigon.or.us

Example Duties:

- Keeps a current certification as a backflow assembly tester
- Ensures every backflow prevention assembly is tested in the City water system, either by doing the testing themselves or using a separate certified tester
- Inspects property water systems as needed
- Available to test or inspect backflow assemblies during business hours

City of Irrigon

City of Irrigon

Appendix A

Irrigon 4100403

- (11) To install, maintain or use any water siphon or injector type pump operation for drainage purposes which uses the water supply from the City's distribution system.
- 13.002 <u>Prohibitions.</u> It shall be unlawful for any water user to do, commit or assist in committing any of the following:
- (1) To allow any obstruction or debris to accumulate on or near any water meter box.
- (2) To allow any debris to accumulate in any water meter box more than 6 inches below the water meter, except during the months of November, December, January and February.
- (3) To pay any water bill upon which payment, or upon the envelope or outside cover of which, are any delineations, epithets, terms, or language of an indecent, lewd, lascivious, or obscene character are printed or written or otherwise impressed or apparent.
- (4) To receive or use water through the water user's service line after water service has been turned off by the Supervisor and before water service is restored by the Supervisor.

SECTION 14: RESPONSIBILITY FOR WATER USER EQUIPMENT.

14.001 <u>City not responsible</u>. The water user shall, at his or her own risk and expense, furnish, install and keep in good and safe condition all equipment that may be required for receiving, controlling, applying and utilizing water, and the City shall not be responsible for any loss or damage caused by improper installation of such equipment, or the negligence, want of proper care or wrongful act of the customer or any of his tenants, agents, employees, contractors, licensees or permittees in installing, maintaining, using, operating or interfering with such equipment. Further, the City shall not be liable for damage to property caused by spigots, faucets, valves, water heaters or other equipment that are open when water is turned on or off at the meter or curb stop, either when the water is turned on originally or when turned on after a temporary shut-down.

SECTION 15: CROSS CONNECTION CONTROL REQUIREMENT.

- 15.001 <u>Identifying cross connections</u>. The Supervisor shall identify and evaluate the premises where potential cross connections exist.
- 15.002 <u>Discontinue service</u>. Where the Supervisor has reasonable cause to believe that an existing or potential cross connection is located on the water user's premises, the Supervisor shall deny or discontinue service to those premises until an appropriate

1.1

backflow prevention device is installed or until the cause of the hazard is eliminated.

- 15.003 <u>Water user to notify Supervisor</u>. Whenever a water user obtaining water from the water works system treats the water in any way or adds any chemical or substance to the water, the water user shall immediately notify the Supervisor.
- 15.004 <u>Installation of backflow prevention devices.</u> Backflow prevention devices for protecting the water works system shall be installed on the service connection to the premises where:
- There is an auxiliary water supply which is, or can be, connected to the potable water piping;
- (2) There is piping for conveying liquids other than potable water, and where the piping is under pressure and is installed and operated in a manner which could cause a cross connection;
- (3) There is intricate plumbing which makes it impractical to ascertain whether or not cross connections exist;
 - (4) There is a back siphonage potential;
- (5) All backflow devices shall be installed in accordance with the American Water Works Association Standards.
- 15.005 Type of backflow prevention device. The type of backflow prevention device required under Section 15.004 shall be commensurate with the degree of hazard which exists:
- (1) An approved air gap of at least twice the inside diameter, but not less than one inch, of the incoming supply line measured vertically above the top rim of the vessel, or an approved reduced pressure (RP) device shall be installed where the substance which could backflow is hazardous to health. Examples; sewage treatment plants, sewage pumping stations, chemical manufacturing plants, plating plants, hospitals, mortuaries, carwashes, medical clinics;
- (2) An approved doublecheck valve assembly shall be installed where the substance which could backflow is objectionable, but does not pose an unreasonable risk to health;
- (3) An approved pressure vacuum breaker or an atmospheric vacuum breaker shall be installed where the substance which could backflow is objectionable but does not pose an unreasonable risk to health and where there is no possibility of back pressure in the downstream piping. A shut-off valve may be installed on the line downstream of a pressure vacuum breaker but shall not be installed downstream of an atmospheric vacuum breaker.

(4) All backflow prevention devices required under this section shall be of a type and model approved by the Supervisor or the Oregon Health Division. The City shall maintain a list of backflow prevention devices approved for use in Oregon.

15.006 Testing and inspection of backflow prevention devices.

- (1) The water user, where one or more reduced pressure device, doublecheck valve assembly, or pressure vacuum breaker have been installed, shall have the device tested at least once per year. Backflow prevention devices found not to be functioning properly shall be promptly repaired by the water user or the City may deny or discontinue service as provided in Section 15.002.
- (2) Backflow prevention devices installed before the effective date of this ordinance which were approved at the time they were installed, but are not on the current list of approved devices maintained by the Oregon Health Division, shall be permitted to remain in service provided they are properly maintained, are commensurate with the degree of hazard, are tested at least annually, and perform satisfactorily. When devices of this type are moved, or require more than minimum maintenance, they shall be replaced by devices which are on the Oregon Health Division list of approved devices.

SECTION 16: PENALTIES.

16.001 <u>Violation</u>. Any person violating Sections 2.001, 7.002, 13.001 and 13.002 commits a Violation, punishable by a fine of not more than \$250.00. Each day that a Violation continues is a separate offense.

SECTION 17: ADDITIONAL REMEDIES.

- 17.001 Money judgement. In addition to the penalties provided in Section 16 of this ordinance, the City may sue in a court of competent jurisdiction to obtain a judgement for any fee due under this ordinance and enforce collection of judgement as allowed by law.
- 17.002 <u>Injunction</u>. The City may seek an injunction to prohibit a person engaged in any activity regulated by this ordinance without first complying with it.
- 17.003 Attorney fees and costs. In any civil action authorized by this section, if the City prevails, it shall be entitled to recover its reasonable attorney fees to be set by the court in addition to its costs and disbursements. These fees are recoverable at all levels of trial and appeal.

SECTION 18: SAVINGS, SEVERABILITY AND REPEAL CLAUSES.

18.001 <u>Savings clause</u>. Ordinances No. 12 and 12-77 and Resolution 82-23, repealed by this ordinance, shall remain in force to authorize the arrest, prosecution, conviction and punishment of a person who violates Ordinance No. 12 before the effective date of this Ordinance.

18.002 <u>Severability.</u> The sections of this Ordinance are severable. The invalidity of a section shall not affect the validity of the remaining sections.

18.003 Repeal. Ordinance No. 12, entitled "An Ordinance Fixing and Establishing Water Rates for Service Inside and Outside the Corporate Limits of the City of Irrigon, Prescribing Rules and Regulations for the Conduct and Operations of the Water System", enacted July 25, 1968; Ordinance No. 12-77, entitled "An Ordinance Amending Ordinance No. 12 to Establish New Water Installation Rates Within the City, and Declaring an Emergency", enacted June 14, 1977; and Resolution No. 82-23, entitled "A Resolution Authorizing the Increase in Water Consumption Rates", enacted June 22, 1982; and any other resolutions affecting the water rates enacted between the dates July 25, 1968 and June 10, 1986 are repealed.

SECTION 19: DECLARING AN EMERGENCY.

19.001 Inasmuch as it is necessary for the health, safety, comfort and convenience of the inhabitants of the City of Irrigon that its water system be improved, an emergency is hereby declared to exist and this Ordinance shall be in full force and effect upon its passage by the Council and approval by the Mayor.

PASSED by the Common Council and APPROVED by the Mayor on this 10th day of June, 1986.

CITY OF IRRIGON, OREGON

Mayor

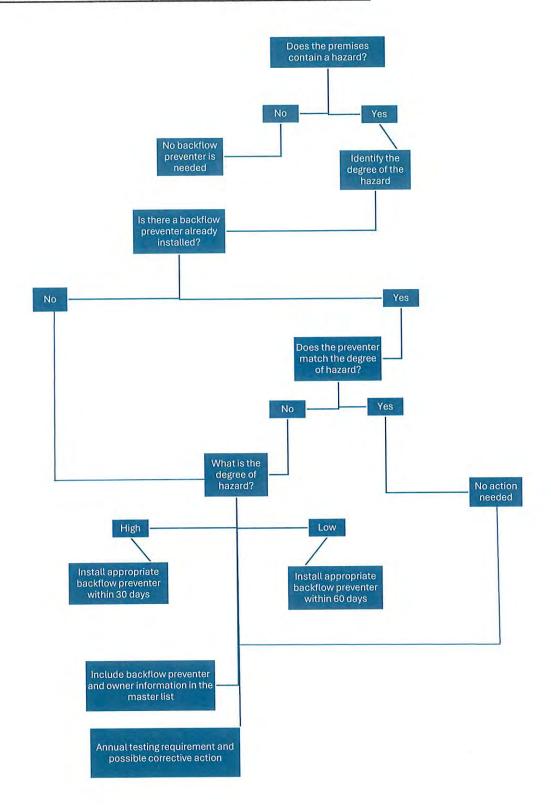

ATTEST:

Mayor Protem

(SEAL)

Appendix B

Diagram for Hazard Next Steps After Survey and/or Inspection:

Appendix C

Dear Customer:

In compliance with Oregon Administrative Rules, the City of Irrigon carries out a *Cross Connection Control Program* that helps protect your drinking water from contamination. A cross connection is any actual (*or potential*) physical connection between a potable (drinking) water pipe and any other pipe, system, or machine that contains non-potable fluids or that have the possibility of containing non-potable substances, and where it is possible for those substances to find their way into the drinking water system. Such an event is called a "backflow".

A backflow is a reverse flow from the normal direction of flow in a piping system. It can occur when systems lose pressure such that non-potable water or fluids flow from the customer pipes back into the drinking water system at lower pressure. Backflows can occur due to either *backsiphonage* or *backpressure* and are preventable. Sprinkler systems are the most common residential hazard.

An essential part of the Cross Connection Control Program is an assessment to determine the degree of hazard, if any, which is posed by each customer's plumbing system(s). Non-residential customers (Commercial and Industrial) pose a special concern because of the greater complexity of their plumbing systems, special water uses, and fire protection systems, etc.

Included with this letter is a "Cross Connection Application Form" that is being distributed to all customers of the City of Irrigon. This application will help to inventory those sites that are a potential cross connection hazard to you and others and to work with those property owners to prevent backflows. Please fill out the attached Cross Connection Application Form and mail it to the City of Irrigon.

If you do not have any of the listed cross connections, please complete the form by simply marking all that apply and return it to the City of Irrigon. It is vital that we receive a response from each customer so we can work diligently to protect your drinking water. Customers who do not return the application or submit annual testing results, may be subject to fines and the City of Irrigon has the authority to shut off all water systems connected to the property.

If you do have a backflow device installed at this time, please include a copy of the latest test results with your survey so our records can be updated. Be sure to include the name of the individual who installed the device and who last tested it.

We appreciate your participation in this program. Should you have any questions regarding the survey, please do not hesitate to contact the City.

Sincerely,

The Cross Connection Staff at the City of Irrigon

City of Irrigon 500 NE Main Avenuc Irrigon, OR 97844 Notification Date:

For the following Property:

Inspection - Official Notice

You are receiving this letter because an inspection of all water systems on the property is needed, and results haven't been received by the City yet. Results of annual inspections are due to the City by December 1st of each year.

The inspection determines if there are any cross connection hazards on the property, and if there is one present, a backflow preventer may be required. If one is required, a separate letter will be sent with further information.

Instructions:

- The City of Irrigon will allow an additional sixty (60) days for you to report results. If this deadline is not met, the City will issue a fine and may also shut off all water systems connected to the premises.
- Contact the City of Irrigon's designated Backflow Assembly Tester to perform inspections on your property water systems:
- Once the inspection is completed, inform the City by providing the results of the inspection.
- Further details can be found in the City of Irrigon Cross Connection Control Program on the City's website: https://ci.irrigon.or.us

Appendix H

What is a Cross Connection?

A cross connection is a point in a plumbing system where the potable water supply is connected to a non-potable source. Briefly, a cross connection exists whenever the drinking water system is or could be connected to any non-potable source (plumbing fixture, equipment used in any plumbing system). Pollutants or contaminants can enter the safe drinking water system through uncontrolled cross connections when backflow occurs.

Backflow is the unwanted flow of non-potable substances back into the consumer's plumbing system and/or public water system (i.e., drinking water).

There are two types of backflow: **backsiphonage** and **backpressure**. **Backsiphonage** is caused by a negative pressure in the supply line to a facility or plumbing fixture. Backsiphonage may occur during waterline breaks, when repairs are made to the waterlines, when shutting off the water supply, etc.

Backpressure can occur when the potable water supply is connected to another system operated at a higher pressure or has the ability to create pressure. Principal causes are booster pumps, pressure vessels and elevated plumbing.

Backflow preventers are mechanical devices designed to prevent backflow through cross connections. However, for backflow preventers to protect as designed, they must meet stringent installation requirements.

Cross Connections can create

Health Hazards

Drinking water systems may become

Polluted or Contaminated

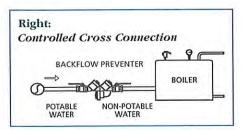

American Water Works Association Pacific Northwest Section

Why Be Concerned?

Most water systems in the United States and Canada have good sources of water and/or sophisticated treatment plants to convert impure water to meet drinking water standards. Millions of dollars are spent to make the water potable before it enters the distribution system so most water purveyors think that their supplies are not in jeopardy from this point on. Studies have proven this to be wrong. Drinking water systems may become polluted or contaminated in the distribution system through uncontrolled cross connections.

Cross connections are installed each day in the United States because people are unaware of the problems they can create. Death, illness, contaminated food products, industrial and chemical products rendered useless are some of the consequences of such connections. As a result, many hours and dollars are lost due to *cross connections*.

Wrong: Uncontrolled Cross Connection POTABLE NON-POTABLE WATER BOILER BOILER

Where are Cross Connections Found?

Cross connections are found in all plumbing systems. It is important that each cross connection be identified and evaluated as to the type of backflow protection required to protect the drinking water supply. Some plumbing fixtures have built-in backflow protection in the form of a physical air gap. However, most cross connections will need to be controlled through the installation of an approved mechanical backflow prevention device or assembly. Some common cross connections found in plumbing and water systems include:

- 1. Wash basins and service sinks.
- 2. Hose bibs.
- 3. Irrigation sprinkler systems.
- 4. Auxiliary water supplies.
- 5. Laboratory and aspirator equipment.
- 6. Photo developing equipment.
- 7. Processing tanks.
- 8. Boilers.
- 9. Water recirculating systems.
- 10. Swimming pools.
- 11. Solar heat systems.
- 12. Fire sprinkler systems.

Every water system has cross connections. Plumbing codes and State drinking water regulations require cross connections to be controlled by approved methods (physical air gap) or approved mechanical backflow prevention devices or assemblies. The various types of mechanical backflow preventers include: reduced pressure backflow assembly (RPBA), reduced pressure detector assembly (RPDA), double check valve assembly (DCVA), double check detector assembly (DCDA), pressure vacuum breaker assembly (PVBA), spill resistant vacuum breaker assembly (SVBA) and atmospheric vacuum breaker (AVB).

For a backflow preventer to provide proper protection, it must be approved for backflow protection, designed for the degree of hazard and backflow it is controlling, installed correctly, tested annually by a State certified tester, and repaired as necessary. Some states require mandatory backflow protection on certain facilities where high health-hazard-type cross connections are normally found. The following is a partial list of those facilities:

- 1. Hospitals, mortuaries, clinics.
- 2. Laboratories.
- 3. Food and beverage processing centers.
- 4. Metal plating and chemical plants.
- Car washes.
- 6. Petroleum processing and storage plants.
- 7. Piers and docks.
- 8. Sewage treatment plants.

What to Do?

It is impossible to cover all of the information pertaining to cross connections in a pamphlet. We hope the preceding information will inspire you to further educate yourself on the hazards of unprotected cross connections. Cross connection control manuals and training schools are offered throughout the Northwest. Information on manuals, schools and cross connection control can be obtained from:

Common Household Hazards

Chemical Spray Applicators

The chemicals used on your lawn and garden can be toxic or fatal if ingested. These chemicals include pesticides, herbicides, and fertilizers. Even strong cleaning chemicals sprayed on cars, house siding, etc., may cause health problems if ingested.

Submerged Hoses

Water held in pools, ponds or other vats open to the air and exposed to humans or animals may contain microbiological contaminants. Hoses submerged in buckets or containers can act as a conduit for contaminants under backflow conditions.

Underground Lawn Irrigation Systems

Underground irrigation systems often have puddles of standing water around the groundlevel sprinkler heads. The sprinkler heads are not designed to be drip-tight under backflow conditions. The puddles of water may contain microbiological contaminants, such as excrement from animals or chemical residue from fertilizer and herbicides sprayed on the lawn.

Help protect your Drinking Water from Contamination

American Water Works Association **Pacific Northwest Section**

How Contamination Occurs

Water normally flows in one direction, from the public water system through the customer's cold or hot water plumbing to a sink tap or other plumbing fixture. The plumbing fixture is the end of the potable water system and the start of the waste disposal system.

Under certain conditions water can flow in the reverse direction. This is known as **backflow**. Backflow occurs when a backsiphonage or backpressure condition is created in a water line.

Backsiphonage may occur due to a loss of pressure in the water distribution system during a high withdrawal of water for fire protection, a water main or plumbing system break, or a shutdown of a water main or plumbing system for repair. A reduction of pressure below atmospheric pressure creates a vacuum in the piping. If a hose bib was open and the hose was submerged in a wading pool during these conditions, the non-potable water in the pool would be siphoned into the house's plumbing and back into the public water system.

Backpressure may be created when a source of pressure, such as a pump, creates a pressure greater than that supplied from the distribution system. If a pump supplied from a non-potable source, such as a landscape pond, was accidentally connected to the plumbing system, the non-potable water could be pumped into the potable water supply.

How to Prevent Contamination of Your Drinking Water

Protect your drinking water by taking the following precautions:

Don't:

- Submerge hoses in buckets, pools, tubs, sinks, ponds, etc.
- Use spray attachments without a backflow prevention device.
- Connect waste pipes from water softeners or other treatment systems to the sewer, submerged drain pipe, etc.
- Use a hose to unplug blocked toilets, sewers, etc.

Do:

- Keep the ends of hoses clear of all possible contaminants.
- If not already equipped with an integral (built-in) vacuum breaker, buy and install hose bib type vacuum breakers on all threaded faucets around your home. These devices are inexpensive and are available at hardware stores and home improvement centers.

Install an approved backflow prevention assembly on all underground lawn irrigation systems. Remember, a plumbing permit is required for the connection of an underground lawn irrigation system to your plumbing system.

Hose Connection Vacuum Breaker

Hose connection vacuum breakers are specifically made for portable hoses attached to threaded faucets. Their purpose is to prevent the flow of contaminated water back into the drinking water. These devices screw directly to the faucet outlet. They can be used on a wide variety of installations, such as service sinks, hose faucets near a wading pool, laundry tub faucets, etc.

Some units are designed for manual draining for freezing conditions. Some are furnished with breakaway set screws as a tamper proof feature.

These device are not intended for operation under continuous pressure.

Protection of the Water Purveyor's Distribution System

In general, the installation of plumbing in compliance with the plumbing code will provide adequate protection for your plumbing system from contamination.

However, the water purveyor may require (as a condition of service) the installation of a backflow prevention assembly on the water service to provide additional protection for the public water system. A backflow prevention assembly will normally be required where a single-family residence has special plumbing that increases the hazard above the normal level found in residential homes, or where a hazard survey cannot be completed.

Hose Connection

Vacuum Breaker

To help determine if a backflow prevention assembly is required, the water purveyor may send residential customers a Cross Connection Control Survey Questionnaire. The water purveyor will evaluate the returned questionnaires to assess the risk of contamination to the public water system. Based on the results of the evaluation, the installation of backflow prevention assemblies may be required on services to some customers.

Approved Backflow Assemblies

The water purveyor relies on approved backflow prevention assemblies to protect the public water system. Approved assemblies are manufactured with isolation valves and test cocks to permit field-testing to demonstrate that the assemblies are properly functioning to prevent backflow.

In addition to the above assemblies, plumbing codes also allow the use of atmospheric vacuum breakers (AVB) on lawn irrigation systems without chemical addition. Because an atmospheric vacuum breaker is not designed to be tested, some water purveyors require the installation of approved, testable assemblies. Contact your water purveyor regarding the requirements for isolation of your lawn irrigation system.

Note:

All irrigation piping should be considered a non-potable water system due to an actual or potential health hazard. For further

Lawn Irrigation
Systems and
Backflow
Prevention

American Water Works Association Pacific Northwest Section

Lawn (Turf) Irrigation Systems

For the protection of the water purveyor's distribution system, all irrigation systems must have an approved backflow prevention assembly that is compatible with the degree of hazard. Irrigation systems are categorized as high health hazard or moderate health hazard as defined below.

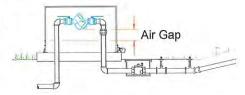

Any irrigation system that contains pumps or injectors for the addition of chemicals and/or fertilizers is considered a high hazard. This risk assessment is also based on the additional hazard posed by bacterial contaminants found on lawns, and on the possibility of changes being made to the irrigation system by the customer. An approved reduced pressure backflow assembly (RPBA), or an approved air gap separation, should be required in all cases where chemicals or herbicides may be injected into the irrigation system, or where an auxiliary water supply is also provided for irrigation water.

All irrigation systems that are not classified as a high health hazard are considered to be moderate health hazards. This risk assessment is based on the hazard posed by bacterial and chemical contaminants found on lawns, and on the possibility of changes being made to the irrigation system by the customer. An approved double check valve assembly (DCVA), or pressure vacuum breaker assembly (PVBA), should be required.

However, an approved PVBA does not provide adequate protection if it is subjected to flooding, backpressure, elevated piping, or if compressed air is used to winterize the irrigation system. In these situations, an approved DCVA should be required as a minimum level of protection.

Reduced Pressure Backflow Assembly for Isolation of Lawn Irrigation System

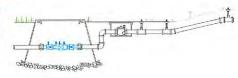

- The reduced pressure backflow assembly (RPBA) should be installed to isolate irrigation systems using injectors or pumps to apply fertilizer and other agricultural chemicals.
- The RPBA must be installed above ground to prevent the relief valve opening from becoming submerged.
- The RPBA should be installed in an insulated enclosure to provide freeze protection.
- The RPBA should be tested by a certified backflow assembly tester upon installation, after repair of relocation, and at least annually.

Reduced Pressure Backflow Assembly in Above-Ground Enclosure

Double Check Valve Assembly for Isolation of Lawn Irrigation System

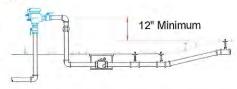

- The double check valve assembly (DCVA) may be installed to isolate all irrigation systems that do not use injectors or pumps to apply fertilizer and other agricultural chemicals.
- The DCVA may be installed in a below-ground enclosure provided the assembly test cocks are plugged; the test cocks are pointed up; adequate space is provided for maintenance and testing; and any compressed air connections are installed only downstream of the DCVA.
- The DCVA shall be tested by a certified backflow assembly tester upon installation, after repair of relocation, and at least annually.

Double Check Valve Assembly in Below-Ground Box

Pressure Vacuum Breaker Assembly for Isolation of Lawn Irrigation Systems

- The pressure vacuum breaker assembly (PVBA) may be installed to isolate all irrigation systems that do not use injectors or pumps to apply fertilizer and other agricultural chemicals.
- The PVBA shall be installed at least 12 inches above the highest point in the irrigation piping.
- The PVBA shall be tested by a certified backflow assembly tester upon installation, after repair of relocation, and at least annually.

Pressure Vacuum Breaker Assembly

Protection from Thermal Expansion

Protection from thermal expansion is provided in a plumbing system by the installation of a *thermal expansion tank* and a *temperature and pressure relief valve* (T & P Valve) at the top of the tank.

The thermal expansion tank controls the increased pressure generated within the normal operating temperature range of the water heater. The small tank with a sealed compressible air cushion provides a space to store and hold the additional expanded water volume.

The T & P Valve is the primary safety feature for the water heater. The *temperature* portion of the T & P Valve is designed to open and vent water to the atmosphere whenever the water temperature within the tank reaches approximately 210° F (99° C). Venting allows cold water to enter the tank.

The *pressure* portion of a T & P Valve is designed to open and vent to the atmosphere whenever water pressure within the tank exceeds the pressure setting on the valve. The T & P Valve is normally pre-set at 125 psi or 150 psi.

Water heaters installed in compliance with the current plumbing code will have the required T & P Valve and thermal expansion tank. For public health protection, the water purveyor may require the installation of a check valve or backflow preventer downstream of the water meter. In these situations, it is essential that a T & P Valve and thermal expansion tank be properly installed and maintained in the plumbing system.

For further information contact your local water purveyor, City or County building department, licensed plumber or the PNWS/AWWA Cross-Connection Control Committee through the PNWS office at (877) 767-2992

American Water Works Association Pacific Northwest Section

Thermal Expansion Danger

Most homes are supplied with hot water from an electric or gas heated tank. Until the heating element stops working, and one is faced with a cold shower, the water heater is usually taken for granted. However, if not properly maintained, a water heater may become a safety hazard.

Water expands in volume as its temperature rises. The extra volume caused by thermal expansion must go somewhere. If not, the heated water creates an increase in pressure. This is the principle of a steam engine.

The temperature and pressure in the water heater is reduced when hot water is withdrawn from a faucet and cold water enters the tank. The increase in pressure from thermal expansion can also be reduced by water flowing back into the public water system. However, when a check valve, pressure-reducing valve or backflow preventer is installed in the service pipe a "closed system" is created. Provisions must be made for thermal expansion in these cases.

Espansion Tank

COLD

T&P Valve Location

WATER HEATER

HOT

T&P

RELIEF

VALVE

DRAIN

The thermostat of the water heater normally maintains the water temperature at about 130° F (54° C). However, if the thermostat Thermal fails to shut off the heater, the temperature of the water will continue to increase.

If the water temperature increases to more than 212° F (100°C), the water within the tank becomes "super heated". When this super heated water is suddenly exposed to the atmosphere when a faucet is opened, it instantly turns to steam. As the pressure within the tank continues to build up under super heated conditions, the tank may explode.

Why the Installation of a Backflow Preventer is Required on a Water Service

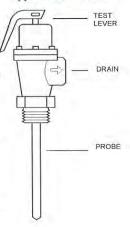

Water normally flows in one direction, from the public water system through the customer's cold or hot water plumbing to a sink tap or other plumbing fixture. The plumbing fixture is the end of the potable water system and the start of the waste disposal system

Under certain conditions water can flow in the reverse direction. This is known as backflow. Backflow occurs when a backsiphonage or backpressure condition is created in

Backsiphonage may occur due to a loss of pressure in the water distribution system during a high withdrawal of water for fire protection, a water main or plumbing system break, or a shutdown of a main or plumbing system for repair. A reduction of pressure below atmospheric pressure creates a vacuum in the piping. If a hose bib was open and a flowing hose was submerged in a wading pool during these conditions, the non-potable water in the pool would be siphoned into the house plumbing then back into the public water system.

Backpressure may be created when a source of pressure, such as a pump, creates a pressure greater than that supplied from the distribution system. If a pump supplied from a non-potable source, such as a landscape pond, were accidentally connected to the plumbing system, the non-potable water could be pumped into the potable water supply.

Typical T&P Valve

What the Homeowner Should Do to Ensure Protection from Thermal Expansion

- The homeowner should check to see that an expansion tank and T & P Valve are in place.
- If there is any doubt, the homeowner should contact a licensed plumber.
- The T & P Valve should be periodically inspected to ensure that it is properly operating.
- Some T & P Valves are equipped with a test lever. Manually lifting the lever unseats the valve, allowing water to discharge. If water continues to leak from the T & P Valve after closing, the valve may need to be replaced. A drain line must be installed to avoid water damage and scalding injury when the valve operates.
- The T & P Valve should be periodically removed and visually inspected for corrosion deposits and to insure it has not been improperly altered or repaired.
- Installation specifications may vary; the above work can best be done by a licensed plumber. Installations should always be in accordance with Manufacturers Instructions.

Flow-through protection systems are those systems that do not have fire department pumper connections. They are constructed of approved potable water piping and materials to which sprinkler heads are attached. The system terminates at a connection to a toilet or other plumbing fixture to prevent the water from becoming stagnant.

Combination protection systems also do not have fire department pumper connections and are constructed of approved potable water piping and materials that serve both the fire sprinkler system and the consumer's potable water system.

Both of the above two systems do not require backflow preventers because they are connected directly to the potable water and inherently designed to potable water standards.

Closed fire protection systems are separated from the potable water system by the minimum use of a Double Check Valve Assembly (DCVA) as long as no chemicals are used and a Reduced Pressure Backflow Assembly (RPBA) if chemicals are used. Closed systems may have a fire department pumper connection.

Note:

- 1. The water purveyor must be consulted for proper backflow prevention requirements.
- It is important to have the system engineered hydraulically. The NFPA standards 13 and/or 13D must be considered when designing the fire system.
- 3. Flow and pressure may not be adequate for fire protection.
- 4. A plumbing and/or fire permit may be required prior to starting the project.
- 5. A system is less expensive to install at initial house construction.
- Some water purveyor's requirements may be more stringent than others – consult you local purveyor for requirements.

For further

Residential

Fire Sprinkler

Systems and

Backflow

Prevention

American Water Works Association Pacific Northwest Section

Residential Fire Sprinkler Systems

Residential fire sprinklers are in greater demand today than ever before. Personal fire safety is such a trend that in many areas ordinances or resolutions require fire sprinklers on all new residential construction.

Residential fire sprinkler systems help save lives and reduce property damage. However, from the water purveyor's point of view, the residential fire sprinkler system presents a potential pollutant and/or contaminant source to the potable water system from cross-connections. Both homeowners and the public may be exposed to health hazards from residential fire sprinkler systems. Such hazards include stagnant water, non-potable piping, heterotrophic bacteria, and chemicals. Therefore these systems must be evaluated for health and system hazards.

The following minimal information should be considered in the selection of backflow protection on residential fire sprinkler systems.

Residential fire sprinkler systems are categorized as *flow-through*, *combination*, and *closed* fire protection systems. Each of these systems has their advantages and disadvantages. It should also be noted that what the local fire departments, local administrative authorities and water purveyors will determine which of these systems can be found in any particular jurisdiction. It is imperative that the water purveyor, local administrative authority, fire department, and other agencies coordinate their efforts in the design and operation of these systems.

Flow-Through Fire Protection Systems

Advantages

- 1. Contains no standing or stagnant water.
- 2. No backflow protection is required.
- 3. Usually requires a single meter.

Disadvantages

- Service line, meter and plumbing system must be designed hydraulically to supply both domestic and fire flow requirements.
- Sprinkler system must have connection at the end to a clothes washer, dishwasher, toilet or other fixture to prevent water from becoming stagnant.

Combination Protection Systems

Advantages

- 1. Contains no standing or stagnant water.
- 2. No backflow protection is required.
- 3. Usually requires a single meter.
- Water use throughout the potable water system eliminates need for water use at the end of the system.

Disadvantages

 The service line, meter and plumbing system must be designed hydraulically to supply both domestic and fire flow requirements.

Closed Fire Protection Systems

Advantages

- Installing a separately metered service line may be cheaper than upgrading an existing service.
- 2. A fire service rate is usually cheaper than a residential service rate.

Disadvantages

- 1. Approved backflow preventers must be installed, thereby increasing the homeowner's cost by its initial installation, and thereafter for annual testing and maintenance.
- When chemicals are added to the fire sprinkler system to prevent freezing, a high health hazard exists. This requires a higher, more expensive, level of protection, i.e., a Reduced Pressure Backflow Assembly (RPBA).
- If the fire service and domestic service are combined, the fire service may not be turned off because of safety reasons.

A Brief History of Cross-Connection Control

Man has long recognized the need for pure drinking water, but only in the last 50 or 60 years has there been any real effort to prevent contamination caused by cross-connections.

Although double check valves came into use around the turn of the century to isolate fire mains and industrial water lines from the potable water supply, little interest was shown in the individual treatment of plumbing fixtures.

In 1929 the major breakthrough came when a device consisting of two check valves with a relief valve between them was successfully tested in Danville, Illinois. However, this valve was not produced commercially and it was not until the late 1930's that the real development of effective vacuum breakers and backflow preventers took place.

It was in this period that ordinances for cross-connection control began to be enforced. The Safe Drinking Water Act, signed into law by President Ford, placed more emphasis on the responsibility for drinking water protection.

The need for cross-connection control exists in all types of premises, whether industrial or residential. Backflow prevention devices help protect the public safety by preventing potable water contamination in such critical areas as municipal water systems, food processing plants, medical and dental water supplies, and many industrial applications.

An informative booklet, for the purpose of a better dissemination of the facts about potential hazards to public health through backflow contamination.

Backflow... What is it?

Backflow? You may have heard of it, and you may understand some of what it involves. This booklet will help you to understand it better; exactly what it is, and how to prevent it.

Backflow is the undesirable reversal of the flow of water or mixtures of water and other undesirable substances from any source (such as used water, industrial fluids, gasses, or any substance other than the intended potable water) into the distribution pipes of the potable water system. There are two types of backflow conditions: backpressure and backsiphonage.

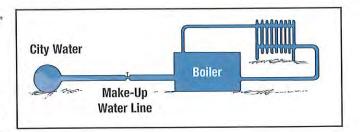

Backpressure: Occurs when the user system is at a higher pressure than the supply water systems allowing undesirable substances to be "pushed" back into the potable water system. Some causes are: booster pumps, potable water system connections for boilers, interconnection with other piping systems operating at higher pressures, or higher elevations in user systems such as high-rise buildings.

One specific example of this would be a steam heating system with the make-up water line piped directly into the boiler. The higher pressure in the boiler could force the chemically treated boiler water back through the make-up water line and into the potable water system.

Backsiphonage: Occurs when negative or reduced pressure exists in the supply piping allowing undesirable substances to be "drawn" into the potable water supply. Some causes are: undersized supply piping, supply line breaks, reduced supply system pressure on the suction side of an on-line booster pump, or sudden upstream high demand. An example of this is a child drinking milk with a straw. The child "sucks" on the straw and the milk flows up the straw and into the child's mouth. What the child is actually doing is creating a subatmospheric pressure in his mouth and the atmospheric pressure (14.7psia at sea level) is pushing down on the surface of the milk and forcing the milk up the straw and into the child's mouth.

There is one other very important term that must be understood before we can proceed. The term is "Cross-Connection," and it is defined as any actual or potential connection between a potable water system and any other source or system through which it is possible to introduce into the potable system any used water, industrial fluid, gas, or other substance other than the intended potable water with which the system is supplied. By-pass arrangements, jumper connections, removable sections, swivel or change-over devices and other permanent or temporary devices through which, or because of which, backflow can or may occur are considered to be cross-connections.

CASE HISTORIES

"All of this is very interesting, but does it REALLY happen?" you may ask. The answer to that is an emphatic YES! Below are listed some typical cases of backflow that actually occurred.

Case No. 1

The year was 1933. People from all over the world were crowding into one of America's largest cities to see the "World's Fair." An epidemic of Amoebic Dysentery broke out and official records show that 98 people died and 1,409 others became seriously ill. Hundreds, possibly thousands of other affected people were never counted by investigating agencies since when they became ill, they went home. A special investigating committee of public health authorities found the main reason of this catastrophe to be "...old and generally defective plumbing and cross-connections potentially permitting backsiphonage from fixtures, such as bathtubs and toilets..."

Case No. 2

In December, 1964, a hospital in the State of Michigan had its potable water system contaminated. The cause was an unprotected autopsy table in the hospital's morgue.

Case No. 3

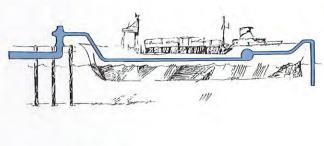

It was in July of 1955 in San Pedro, California, a U.S. Navy Destroyer pumped salt water through five obsolete check valves into the street mains in a 90 square block of the town.

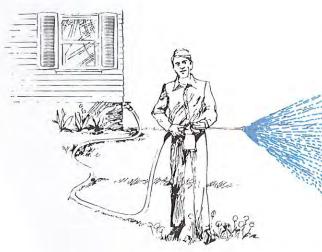

Case No. 4

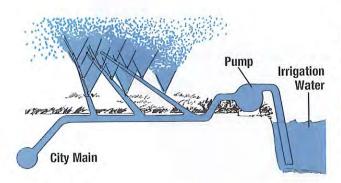

This unusual death was caused by backsiphonage in a suburb of one of California's largest cities. A man was spraying his lawn with a commercial weed killer that contained an arsenic compound. His applicator was an aspirator device on his garden hose, to which was attached a bottle of the arsenic poison. When he had finished spraying, the man turned off the hose, disconnected the applicator, and since it was a warm day, turned the hose on again to get a drink of water. A short time later, he was dead from arsenic poisoning. At some time while he was spraying, a backsiphonage condition had occurred and the arsenic was carried back into the hose.

Case No. 5

In 1969 in Utah, raw irrigation water was pumped through a farm standby irrigation connection into over half of the entire town's potable water system. The standby connection was not protected with a backflow prevention device.

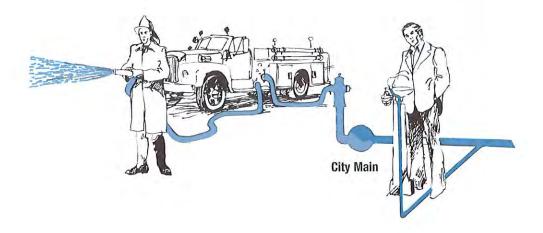

CASE HISTORIES

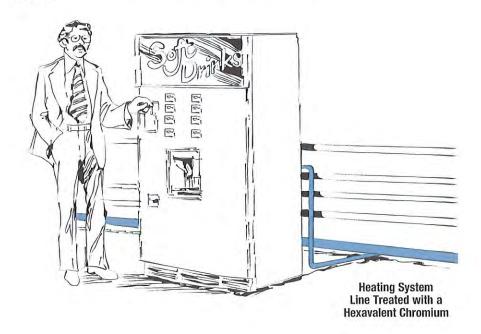

Case No. 6

In August, 1969, 83 football team members and coaching staff were stricken with infectious hepatitis due to subsurface hose bibs and a nearby fire. The fire trucks in fighting the fire reduced the main pressure enough to cause backsiphonage from the hose bibs.

Case No. 7

In the summer of 1970 in New Jersey, a soft drink vending machine in the Caddy house of a golf club was connected to the building heating system in which hexavalent chromium had been added. Eleven cases of nausea were reported by the caddies.

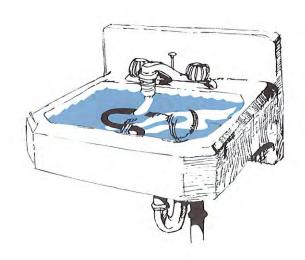

TYPICAL CROSS-CONNECTIONS

Spray Hose in Sink

This type of cross-connection is commonly found in the food industry and in janitor's sinks. A hose has been connected to the faucet on the sink. When the faucet is left running, a loss in pressure of the supply main can siphon this used water back into the potable water system.

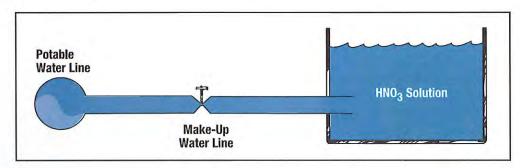

Submerged Inlets

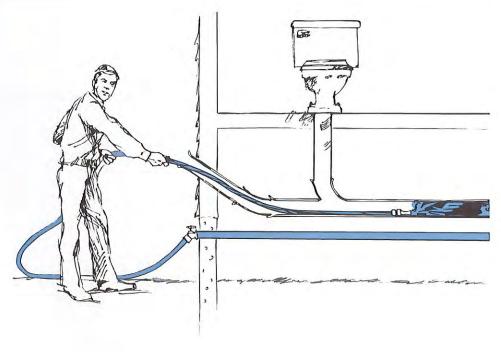

In many industrial installations that use chemically treated baths, the make-up water line runs directly into the tank. If there is backsiphonage, the toxic chemicals can be sucked back into the potable water system.

Hose Bibs

At first glance, a hose bib seems innocuous, but it is the things people do with the hose that creates problems. In this example, a man is trying to blow a stoppage out in a sewer line, but with a sudden drop in line pressure, this contaminated water can be backsiphoned into the potable water system.

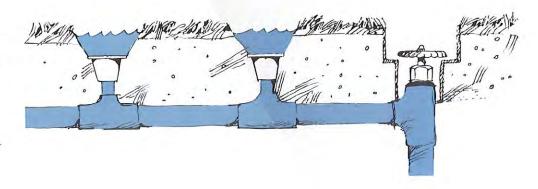

TYPICAL CROSS-CONNECTIONS

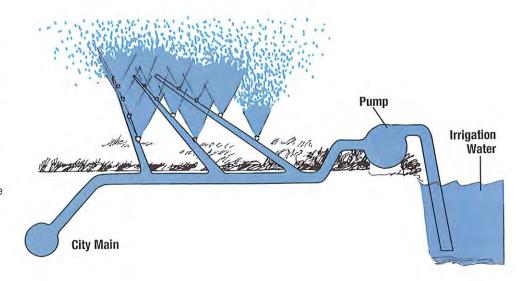

Lawn Sprinklers

On a large number of lawn sprinkler installations, the sprinkler head is below the ground level. Water which may have been in contact with fertilizers and weed killers can then be backsiphoned through a leaky valve into the potable water system.

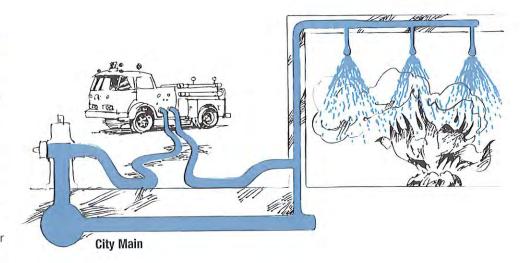

Irrigation Pumping Systems

On many farms water is pumped from irrigation water channels into the sprinkler system. A large number of these installations are also connected to the domestic water system for times when there is little or no irrigation water available. It is possible that the pump develops more pressure than there is in the domestic supply main and the irrigation water can then be pumped through a leaky or partially open crossover valve.

Fire Sprinkler Systems

On a large number of fire sprinkler systems, there is a hook up connection for the fire truck pumper to increase pressure and flow in the sprinkler system. At times a "wetting agent" is added to the water to increase the effectiveness of the water in combating the fire. If the system is not protected, it is possible for the pumper to pump this "wet" water back into the city's domestic water supply.

BACKFLOW PREVENTION DEVICES

There are several different types of mechanical backflow prevention device. An alternative to a mechanical device, is a physical separation, or air gap. The air gap is a physical break in the system. The different types, of mechanical device, are used in different situations (if there is backpressure or backsiphonage) and for different degrees of hazard.

The degree of hazard is based on the fluid (or other substance) that may backflow into the supply piping system. The fluid may be toxic or nontoxic and could create a "non-health" or "health" hazard.

A non-health (non-toxic) hazard cross-connection is any point on a water supply system where a polluting substance may come in contact with potable water aesthetically affecting the taste, odor or appearance of the water, but not hazardous to health.

A health hazard (toxic) cross- connection is any point on a water supply system where a contaminating substance may come in contact with potable water creating an actual health hazard, causing sickness or death.

Double Check Valve Assembly (DC)

The double check valve assembly (DC) is composed of two single, independently acting check valves. The unit also has two tightly closing, resilient seated, shutoff valves located at each end of the device and four test cocks for the testing of the check valves.

Reduced Pressure Principal Assembly (RP)

Commonly referred to as an RP or RPP, this device consists of two independently acting check valves, together with an automatically operating pressure differential relief valve located between the two check valves. The first check valve reduces the supply pressure at a predetermined amount so that during normal flow, and at cessation of normal flow the pressure between the two check valves shall be lower than the supply pressure. If either check valve leaks, the relief valve will discharge to atmosphere. This will maintain the pressure in the zone between the two check valves lower than the supply pressure. The unit also has two, resilient seated, shutoff valves (one upstream and one downstream of the checks) and properly located test cocks for field testing.

Pressure Vacuum Breaker (PVB)

The pressure vacuum breaker (PVB) is a device that contains within a single body, a single loaded check valve and a loaded air opening valve which opens to admit air whenever the pressure within the body of the device approaches atmospheric. The device has two tight closing, resilient seated, shut-off valves, and it is fitted with test cocks, appropriately placed, for testing the device.

Dual Check Valve (DuC)

The dual check (DuC) is a device which has two single, independent acting check valves in series. It does not have any testcocks and is generally not field tested.

Dual Check with Atmospheric Port (DCAP)

This device has two independent acting check valves with a relief valve located between the checks. The device is not testable and should only be used for lower degrees of hazard.

Atmospheric Vacuum Breaker (AVB)

An atmospheric vacuum breaker (AVB) is a device which has a moving element inside, which during flow prevents water from spilling from the device and during cessation of flow, drops down to provide a vent opening. This device should not remain under pressure for long durations, and it cannot have any shutoff valve downstream of it.

Air Gap

An air gap is a physical separation between the free flowing discharge end of a potable pipe line and an open or non-pressure receiving vessel. To have an acceptable air gap, the end of the discharge pipe has to be at least twice the diameter of the pipe above the topmost rim of the receiving vessel, but in no case can this distance be less than one inch.

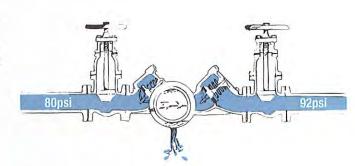

This may seem to be the simplest, most effective and least expensive type of protection. However, the chance for future cross-connections, the cost of additional pumps to pressurize the system often makes this an expensive protection system.

Spill-Resistant Vacuum Breaker (SVB)

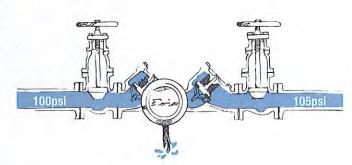

The valve shall consist of a one-piece modular check valve force-loaded closed and an air inlet valve forced loaded open to atmosphere, positioned downstream of the check valve, and located between two (2) tightly closing shut-off valves and two (2) test cocks.

HOW BACKFLOW PREVENTION DEVICES WORK

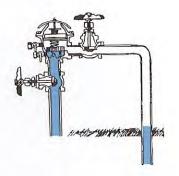

This figure shows an RP device during a backsiphonage condition. If you will notice, both checks are closed tight and the pressure differential relief valve is discharging to atmosphere. This is due to the fact that the relief valve is designed to maintain a lower pressure in the zone between the two check valves than the supply pressure.

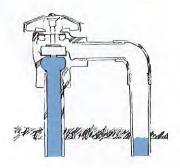

In this figure of an RP device, there is a backpressure condition. The second check is fouled with a piece of pipe scale which permits the higher pressure to flow back into the zone. Here the relief valve discharges the water to atmosphere maintaining the pressure in the zone lower than the supply pressure.

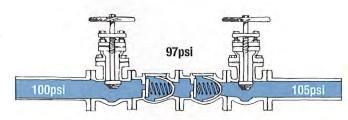

In this view of a pressure vacuum breaker, a backsiphonage condition has caused the check to close against its seat and the air-inlet has opened so that the pressure in the body of the device is atmospheric. If the check was fouled by some foreign material, only air would be pulled back into the domestic supply system instead of the non-potable water downstream of the device.

In this picture of an atmospheric vacuum breaker, a backsiphonage condition exists. This condition has caused the check-float to drop away from the air-inlet and seat on the check seat, which prevents the non-potable water from being backsiphoned. If the check-float did not seat properly, again only air would be sucked back into the domestic water system.

In this view of a double check valve, there is backpressure from a source downstream which has caused the second check to close tightly against this reverse pressure. The first check has closed tightly by itself, thus giving two barriers against the backflow condition.

DEVICE SELECTION

The selection of the proper type of device is important. Depending upon the fluid that can backflow, whether it is toxic or non-toxic; and whether there can be backpressure or backsiphonage; it will govern the type of device selected. The following chart will help you to decide what type of device to use.

RP - Reduced Pressure Assembly

DC - Double Check Assembly

PVB - Pressure Vacuum Breaker

AVB - Atmospheric Vacuum Breaker

DuC - Dual Check

DCAP - Dual Check with Atmospheric Port

	RP	DC	PVB	AVB	DuC	DCAP
Continuous Pressure	1	1	1		1	1
Possible Back- pressure	1	1			1	1
Possible Back- siphonage	1	1	1	1	1	1
Nontoxic	1	1	1	1	1	1
Toxic	1		1	1		

INSTALLATION

Having a device on the connection is not enough, the device MUST be installed correctly. The following details and illustrations will help you in the proper installation of the devices.

Reduced Pressure Device

In these figures, the RP device is shown on the service connection. The RP can also be used for internal protection. The minimum clearance of 12" above the floor or grade is to ensure an air gap between the relief valve and any water that might puddle beneath the device. The maximum height is so that the device will be easy to work on during testing and maintenance. If the device is in a protective enclosure or mounted against a wall, the minimum distances are so that the device can be tested and maintained.

INSTALLATION

Double Check Valve

In these figures, the double check assembly is shown on the service connection, it can also be used for internal protection as well. The minimum and the maximum distances are the same as they are for the RP device.

Dual Check

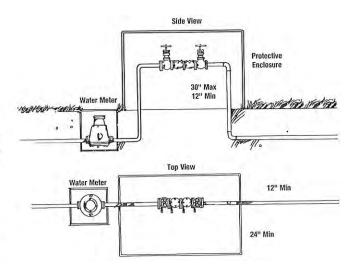

The dual check is usually installed immediately downstream of the water meter in residential installations (not shown).

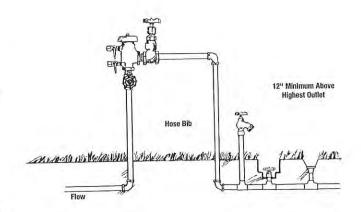

Pressure Vacuum Breaker

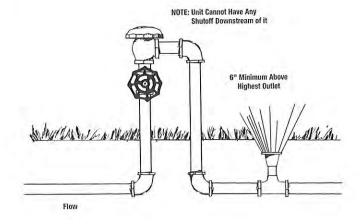

The pressure vacuum breaker cannot be installed where there can be backpressure. It should only be used where there may be backsiphonage. The pressure vacuum breaker can have shutoff valves downstream of the device. The PVB must be installed at least 12" above the highest outlet or, if it is feeding an open tank, at least 12" above the highest overflow rim of the tank. The following figure shows a typical installation on a sprinkler system.

Atmospheric Vacuum Breaker

Just as the pressure vacuum breaker, the atmospheric vacuum breaker cannot be installed where there can be backpressure, only where there can be backsiphonage. The atmospheric vacuum breaker cannot have any shutoff valves downstream of it. It also must be installed at least 6" above the highest outlet or the topmost overflow rim of a nonpressure tank. The following illustration shows the AVB on a sprinkler system.

TESTING

All mechanical devices should be inspected on a regular basis to ensure they are working correctly. Pressure vacuum breakers, double check and reduced pressure principle assemblies should be tested at time of initial installation and annually thereafter. Acceptable test procedures are published by The University of Southern California (USC), The American Water Works Association (AWWA), The American Society of Sanitary Engineering (ASSE Series 5000), and The Canadian Standards Association (CAN/CSA B64.10). Please consult the regulatory authority in your area for more specific information.

TOGETHER, THREE WATTS BRANDS PROVIDE SOLUTIONS FOR A BROAD ARRAY OF BACKFLOW PREVENTION APPLICATIONS.

RE: Quotes for Lift Station Generator and ATS (SB1530 Infrastructure Project) Item #5

Last month the City of Irrigon awarded the back-up generator to Romtec Utilities, Inc. for \$54,375.00. However, Romtec failed to meet and sign the documents of agreement. Because they failed to meet the required document (bid) stipulations they will forfeit a bid bond for failure to sign in the amount of five (5) percent (\$2,718.75) as noted in Schedule 2 of the previous Bid documents.

The back-up generator is a required piece of this infrastructure project. Therefore, in accordance "Intermediate procurement" under ORS 279B.070 the following solicitation took place for procurement of this item.

The procurement was received and JUB recommends approval.

Staff recommends acceptance of JUB Engineers recommendation of the Generator and ATS acceptance for the – Advanced Lift Station Project to Western States Equipment Company for \$38,618.00 of the back-up generator as presented and authorizing the Mayor and City Manager to sign contract documents.

HELPING EACH OTHER CREATE BETTER COMMUNITIES

City of Irrigon 500 NE Main Ave. Irrigon, OR 97844

RE: Columbia Lane Lift Station Advanced Generator and ATS Procurement – Recommendation for Award

Dear Aaron,

The Columbia Lane Lift Station Advanced Generator and ATS Procurement was sent out for private solicitation for quotes to three vendors in accordance with the "Intermediate Procurement" criteria listed in ORS 279B.070. The three suppliers contacted for quotes were Power Systems West, Western States Equipment Company, and Cummins Sale and Service. The project received one quote from Western States Equipment Company. The total prices are summarized as follows:

	Backup Generator and ATS
Engineers Estimate	\$35,000.00
Western States Equipment Company	\$38,618.00

We recommended awarding the project to Western States Equipment Company for the amount of \$38,618.

A summary of the evaluation of the bid is attached. The City should work with legal counsel to review the bid, conduct any further review that is warranted, consider irregularities that may be present based on your review, waive any informalities, and make a final recommendation to the City Council for contract award.

Since the contract price does not exceed \$100,000 and was solicited under the "intermediate procurement" for competitive quotes, the award is exempt from the competitive bidding requirements (ORS 279C.335), and a "notice of intent" with a 7-day protest period does not apply (ORS 279C.375(2). Attached to this letter is the Notice of Intent to Award to Western States Equipment Company, our bid evaluation summary, Notice of Award, and Purchase Agreement. Once you have reviewed (and accept), we will send this intent to Western States. Once the City Council awards the project, we will issue the Notice of Award and the Purchase Agreement to Western States.

Sincerely,

J-U-B FAMILY OF COMPANIES

Ben Haws, P.E. J-U-B ENGINEERS, Inc.

NOTICE OF INTENT TO AWARD Columbia Lane Lift Station Advanced Generator and ATS Procurement Project

The <u>City of Irrigon</u> announces its intent to award the contract for the <u>Columbia Lane Lift Station Advanced Generator Procurement Project to Western States Equipment Company</u> for the amount of <u>Thirty-Eight Thousand Six Hundred and Eighteen Dollars and Zero Cents (\$38,618.00)</u>.

This Notice of Intent to Award is subject to execution of a written contract and, as a result, this Notice does NOT constitute the formation of a contract between the <u>City of Irrigon</u> and the apparent successful bidder. The bidder shall not acquire any legal or equitable rights relative to the contract services until a contract containing terms and conditions acceptable to the <u>City of Irrigon</u> is executed. If the apparent successful bidder fails to negotiate and execute a contract with the <u>City of Irrigon</u>, the <u>City of Irrigon</u> may revoke the award and award the contract to the next lowest bidder or withdraw the Bid. The <u>City of Irrigon</u> further reserves the right to cancel this Notice of Intent to Award at any time prior to the execution of a written contract.

Thank you for participating in the immediate procurement process.

Dated this 14th day of November, 2024.

Title: City Manager

for The Owner: City of Irrigon

NOTICE OF AWARD

TO: Andrew Erickson, Western States Equipment Company
FROM: CITY OF IRRIGON 500 NE Main Ave Irrigon, OR 97844 (541) 922-3047
RE: Advanced Generator and ATS Procurement
DATE:11/19/2024
This Notice of Award is to advise you that the City of Irrigon has accepted your bid for the above-described goods and materials.
In accordance with the Bid Package, you have seven (7) business days from the date of this Notice of Award to furnish the completed Purchase Agreement and Performance Bond called out in the Bid Package.
This is <u>not</u> a Notice to Proceed for the performance of the work under the Purchase Agreement. When you have complied with the requirements set forth in the Bid Package a Notice to Proceed will be issued to you.
You are required to return an acknowledged copy of his Notice of Award to the City of Irrigon.
City of Irrigon

PURCHASE AGREEMENT

CITY OF IRRIGON, hereafter referred to as the "City", agrees to purchase from Western States Equipment Company, hereafter referred to as "Supplier", the goods and materials, hereafter referred to as "goods", set forth on the attached Bid Schedule subject to the terms and conditions of this agreement below:

- 1. The goods to be delivered by the Supplier shall conform to the specifications contained in the City's Bid Package, which is made a part of this agreement.
- 2. The Supplier agrees that the City may increase the amount of goods to be delivered under this Purchase agreement, at the unit prices provided for in the Bid Schedule until the Notice to Proceed is issued.
- 3. A two-week notice shall be required of the Supplier to notify the installation contractor before delivery.
- 4. After acceptance of goods delivered to the project site by the installation Contractor, the Supplier shall provide the City with an invoice setting forth the quantity of goods that have been delivered, the unit prices and the total price. The City will confirm the quantities delivered and pay the invoice within 45 business days. The acceptance of delivery by the installation Contractor on the City's behalf shall not be deemed to be a final acceptance of the goods for any purpose, including defective or non-conforming goods. Only one payment per 30-day period will be made by the City for materials that have been delivered. The Supplier will be solely responsible for the equipment while stored at their facility and during delivery to the City.
- 5. Following delivery of the goods to the Owner's storage facility, acceptance of delivery and payment by the City, title to the goods shall pass to the City free and clear of any liens or encumbrances.
- 6. The Supplier warrants that the goods conform to specifications issued by the City and are fit for the uses or purposes disclosed by the City. The Supplier further warrants that the goods are free from defects, either obvious or latent.
- 7. In the event any of the goods fail to comply with the specifications or the warranties of the Supplier, at its option, the City may require the Supplier to replace the defective or non conforming goods. In the event the City purchases replacement goods, the Supplier shall refund any money paid to it by the City on the account of the defective or non-conforming goods, and in the event the replacement goods are more costly than the goods provided by the Supplier, the Supplier shall reimburse the City for the excess cost of purchasing the replacement goods.
- 8. The Supplier shall be responsible for any damages resulting to the City from any non- conforming or defective goods and the Supplier shall defend and indemnify the City from any claims, damages, litigation, expenses or costs, including fees which the City may incur as a result of the defective or non-conforming goods.
- 9. This Purchase Agreement and the attachments hereto as well as the Bid Package constitutes the entire agreement between the parties. Any amendments to this agreement shall be in writing and signed by both parties. This agreement may not be modified by language contained in the Suppliers invoice, documents of delivery, or title documents.
- 10. In the event either party must bring an action to enforce any of the items or conditions of this agreement, the prevailing party shall be entitled to recovery of all costs of such action, including reasonable attorney fees. For the purposes of this section the term "action" shall include an arbitration hearing.
- 11. This agreement shall be interpreted and enforced in accordance with the laws of the State of Oregon.

12 F	rogress	Payment	Terms	VlaaA
------	---------	---------	-------	-------

- a. 15% Fifteen percent on receipt of approved submittal
- b. 30% Thirty percent on Supplier's order of major components
- c. 20% Twenty percent on receipt of major components at Supplier's facility
- d. 30% Thiry percent upon arrival of equipment to Owner
- e. 5% Five percent on startup

Ordinance 263-24 "Vacation of a City Street - SE Thomas Avenue" Item #6 RE:

This presented ordinance is before City Council to deliberate and make a decision to facilitate a better alignment of SE Thomas Avenue and provide for housing development.

This street has previously been noted as a dedicated right of way (ROW). Historically with state practice and processes, such ROW's where able to be realigned as part of a new and broader platting process. While "new" streets can be added during the platting process has called for increased clarity on existing ROW's that will be removed, relocated, or reduced in size and length. The New Dream Subdivision (off SE Division St.) is requesting this vacation of a full ROW for a portion of SE Thomas Ave. and a vacation to a reduction in size, as noted on Ordinance 263-24. New actions will then be noted on the future platting maps of a relocated SE Thomas Ave, to run south of the existing ROW between SE Division and SE Tenth Streets. Additionally, a portion of SE Thomas Ave., just off of SE Tenth Street will become SE Thomas Lane.

Staff recommends the adoption of Ordinance 263-24 as presented and declaring an emergency.

ORDINANCE NO. 263-24

AN ORDINANCE VACATING A PORTION AND DEDICATING AND ACCEPTANCE REAL PROPERTY AS AN IRRIGON CITY STREET AND DECLARING AN EMERGENCY

WHEREAS: The City of Irrigon previously dedicated a city street as SE Thomas Avenue which will be part of the New Dream sub-division; and

WHEREAS: the New Dream sub-division, needs the current roadway for correct land use development and correct infrastructure; and

WHEREAS: This property is needed to maintain the public safety and traffic flow and meet the required right of way requirements;

NOW, THEREFORE, The City Council of the City of Irrigon ordains as follows:

1. The following described as SE Thomas Street is hereby vacated as a public street within the City of Irrigon.

Vacation of Portion of Thomas Street

Legal Description of Vacated Portion SE Thomas Street

That portion of SE Thomas Street located between the East Right of Way of SE Division Street and the West Right of Way of SE 10th Street located in the Southwest Quarter of the Northwest Quarter of Section 30, Township 5 North, Range 27, East of the Willamette Meridian, City of Irrigon, Morrow County, and State of Oregon. Said portion of SE Thomas Street was dedicated in Plat of Hillcrest Estates, Document No. M-50353, Morrow County Plat Records, filed on February 12, 1997.

- 2. An emergency is declared, in that this Ordinance, being necessary for the immediate preservation of the public peace, health safety and/or welfare, shall take effect upon passage.
- 3. The city manager will see that this ordinance be promptly filed, with a certified copy and the vacation proceeding, with the county clerk, county assessor and the county surveyor of Morrow County.

IN WITNESS WHEREOF, the City Council of the City of Irrigon has duly adopted this ordinance and caused it to be executed by the Mayor on this 179th day of November 2024.
